VOLUME 2, CONTENTS

Investigation of 1, 3, 4-oxidiazole scaffolds as Potentially Active Compounds - Rakesh R. Somani, Anuj G. Agrawal, Pushkar P. Kalantri, Prabhjeet S. Sawhney, Erik De Clercq • Synthesis of a Novel Class of Some 1,3,5-Triazine Derivatives and their Anti-HIV Activity - Senta D. Desai, Kishor R. Desai, Kishor H. Chakravarthy, Christophe Pannecouque, Erik De Clercq • Synthesis, Characterization and Biological Activity of novel 3-benzoyl-2-(4''-substituted phenyl)-4''-(1H)-imidazoles - P. Ram, R. Siva Kumar • QSAR Modeling of Substituted Benzimidazole Derivative as Angiotension-I receptor Antagonist: WHIM Descriptors - Vivek K. Vyas, Manjunath Ghate • Synthesis and Antibacterial Activity of Azaaxetidinones and Thiazolidinediones of 1-(4''-thiazolyl)-4''-(4''-nitrophenyl amino)-1,3-oxazolidines - Shreepur Singh, Vivasakti Kumar, Ashok Kumar, Shashikant Sharma, Pushpa Dua • Discovery of New Imidazothiazoles Derivatives as Potential Microbial Agents - Ritesh B. Patel, Vivasakti, A. Desai

Validation of QSAR Models - Strategies and Importance - Racchanath V. Vasanchem, Harish Rajak, Ashoksh Khan, Shalini Sivasakal, Christopher P. Vargheese, Ram Kothare Agrawal • Quantitative Structure Metabolism Relationship (QSMR): Comparative Molecular Field Analysis of CYP2D6 Substrates - Ramnath R. Prasad V. Prasad, V. Thiyagarajan, Shreyansh V. Thiyagarajan, S. Siva, V. Prasad • Discovery of Novel Inhibitors Against Resistant Streptococcus pneumoniae MurF Enzyme using Pharmacophore Modeling and QSAR Analysis - Rashid V. Bhat, D. Bagyaraman D. Bagyaraman, Pradeep Kumar Mathur • Synthesis and Biological Evaluation of some 2-(5,6-Dimethoxy)imidazo-4-(3,4-Dioxadiazole Derivatives - Rakesh R. Somani, Anuj G. Agrawal, Umesh V. Bavshukar, Pushkar P. Kalantri, Pramod Kumar Mehta • Synthesis and Pharmacological Evaluation of 7-(2-Oxadiazol-4-(3,4-Dioxadiazole)-4-Methyl-Chromen-2-Ones as Serotonin 5HT Receptors Antagonist - Vinak Srid, Sushil Kumar, Sushal Me, Quantitative Structure Activity Relationship Analysis of Benzimidazole Derivatives as Alloste Reductase Inhibitors - P.K. Singour, D. V. Kole

Modified BH-fluorene-9-carboxamides as MTF-inhibitors - Suvaal Raval, Mukul Jain, Niket Khare, Preeti Raval, Digvijay Jogiya, Krunal Soni, Jan’12 - Dec’12

Pharma Book Syndicate
I am happy to commence Third Volume of the Journal, having successfully concluded the second. My thanks are due to all the contributors, subscribers and readers without whose cooperation the task could not have been completed. The Editorial Board and the publishers are doing their best in bringing out the Journal on schedule and this will be ensured, in future, as well. All attempts are being made from our end not only to maintain the standard and quality of the Journal, but also to improve further. In this regard, I call upon the scientific and technical communities to contribute their mite to the well being of this Journal and to realize our mission.

I am quite conscious that there are several areas and fields of the vast subject still remain uncovered, at least to the extent of this Journal is considered. Thus, it should be taken as a challenge to come forward with the Reviews and Research Papers from such novel fields, so that we will have privilege of sharing them, globally.

I personally look forward to receive the contributions from the experienced stalwarts in Drug Design and Discovery, for the benefit of young and enthusiastic researchers.

If you are interested kindly send your manuscript for publication in this journal by email to drdsriram@yahoo.com or pyogie_2000@rediffmail.com. We will then send it for peer-review regarding its importance before final acceptance.

We look forward to receiving your positive response.

D. Sriman
Chief Editor
