<i>Preface</i>	(v)
----------------------	-----

Part I: Pre Cooling of Fruits and Vegetables and their Storage Requirement

CHAPTER 1

Introduction

1.1 Storage Operations	6
1.1.1 Traditional Storage Methods	6
1.2 Modern Storage Methods	8
1.2.1 Storage with Mechanical Refrigeration	8
1.3 Controlled Atmosphere Storage	10
1.4 Modified Atmosphere Packaging	11
<i>References</i>	12

CHAPTER 2

Post Harvest Physiology of Fruits and Vegetables

2.1 Respiration	14
2.2 Internal Factors Affecting Respiration	15
2.3 External Factors Affecting Respiration	16
2.3.1 Temperature	16
2.3.2 Ethylene	17
2.4 Oxygen and Carbon Dioxide Concentration	18
2.5 Mechanical Stresses	19
2.6 Respiration Rate	19
2.7 Van't Hoff's Law	20
2.8 Calculation of Q_{10} Values	21
2.9 Heat of Respiration	23
2.10 Transpiration	26
2.11 Factors Influencing Transpiration	26

<i>Contents</i>	(x)
2.12 Surface Heat Transfer Coefficient	31
2.13 Determination of Water Vapour Pressure Deficit (VPD)	34
2.14 Post Harvest Decay	36
<i>Questions</i>	37
<i>References</i>	38

CHAPTER 3

Estimation of Cooling Times of Foods

3.1 Fourier Heat Conduction Equation	40
3.2 Estimation of Cooling Time based on f and j Factors.....	42
3.2.1 Determination of Factor f	43
3.2.2 Determination of J-Value	44
<i>Problems</i>	46
<i>Questions</i>	49
<i>References</i>	49

CHAPTER 4

Pre-cooling of Fruits and Vegetables by Ventilation Method

4.1 Factors Contribution to Spoilage	52
4.2 Selection of a Cooling Method	52
4.3 Ventilation.....	52
4.4 Estimation of Air Flow for Moisture Removal	53
4.5 Air Flow – Required in Heat Removal	53
4.6 Ventilation Systems	54
4.6.1 Natural Ventilation System.....	54
4.6.2 Mechanical Ventilation System.....	54
4.6.3 Extraction System.....	54
4.7 Forced System.....	55
4.8 Combined Forced and Extraction System.....	55
4.9 Natural Ventilation.....	56
4.9.1 Ventilation by Wind Forces.....	56
4.9.2 Rate of Ventilation.....	57
4.9.3 Wind Speed and Direction.....	57

<i>Contents</i>	(xi)
4.10 Effectiveness of Ventilator Openings	57
4.11 Low Cost Cold Room	59
4.12 Store House	59
4.13 Layout of Floor Ducts for Store House.....	60
4.14 Overhead Ventilation Air Distribution System.....	61
4.15 Package Icing	62
4.16 Ice Bunker	63
4.17 Wind Rowed Top-Icing.....	64
4.18 Problems on Cooling Load Calculation	65
<i>Questions</i>	69
<i>References</i>	70

CHAPTER 5

Forced-Air Cooling of Fruits and Vegetables

5.1 Effects of Containers and Stacking Patterns	74
5.2 Commercial Methods of Forced Air Cooling	74
5.2.1 Forced Air Room Cooling	75
5.2.2 Cold Wall-Forced Air Cooling	76
5.2.3 Tunnel Type Forced Air Cooling	77
5.2.4 Forced Air-Serpentine Cooling.....	77
5.2.5 Hydro-Air-Cooler	78
5.2.6 Air Cooling of Cut Flowers	79
5.3 Product Moisture Loss in Forced-Air-Cooling	79
5.4 Produce Cooling Pattern with Forced Air Cooling	80
5.5 Wet Cooling System and Flow-through Cooling.....	83
<i>Questions</i>	85
<i>References</i>	85

CHAPTER 6

Hydro Cooling of Fruits, Vegetables and Cut Flowers

6.1 Heat Load.....	87
6.1.1 Mass Average Temperature	87

6.2 Hydro Cooling Rates.....	88
6.3 Emperical Methods for Calculating Hydro Cooling Rates	90
6.3.1 Half Cooling Time	93
6.4 Hydro Cooling Methods.....	99
6.5 Types of Hydro coolers.....	100
6.5.1 Continuous Flow Immersion Hydro cooler	100
6.5.2 Water Shower Hydro cooler	100
6.5.3 Batch Type Hydro Cooler.....	102
6.6 Hydro cooler Design Consideration.....	102
6.7 Hydro cooler Operation and Maintenance	103
6.8 Warm-Up after Hydrocooling	104
6.9 Refrigerated Storage of Flowers	105
6.10 Dry Storage of Flowers	106
6.11 Bud Harvesting	107
6.12 Other Approaches	108
6.13 Nursery Stock and Cut Flowers	108
6.14 Storage aspects of few more Horticultural Products.....	111
<i>Questions</i>	112
<i>References</i>	112

CHAPTER 7

Evaporative Cooling Systems for Fruits and Vegetables

7.1 Introduction.....	114
7.2 Thermodynamics of Evaporative Cooling	114
7.3 Psychrometry of Evaporative Cooling Process.....	114
7.3.1 Heat Balance.....	115
7.3.2 Efficiency of Evaporative Cooling System	116
7.4 Types of Evaporative Cooling Systems	116
7.4.1 Fan and Pad Type	116
7.4.2 Mist or Spray Type Evaporative Cooling System	119
7.4.3 Limitations of Simple Evaporative Cooling Systems.....	120

7.5 Indirect or Modified Evaporative Cooling System	120
7.5.1 Modified Evaporative Cooling when outside Air is Hot and Dry	121
7.5.2 Modified Evaporative Cooling When outside Air is Hot and Wet.....	122
7.6 Energy Cube System.....	124
7.7 Design of Wet Bulb Temperature and Air Flow for Evaporative Cooling Systems	124
7.8 Duct work.....	125
7.9 Worked out Problems on Evaporative Cooling.....	126
7.10 Points to be noted in Evaporative Cooling.....	130
7.11 Cost of Evaporative Cooling Systems.....	131
7.12 Maintenance of Evaporative Cooling Systems	131
7.13 Design of Cascade Evaporative Cooling System.....	132
<i>Questions</i>	138
<i>References</i>	138

CHAPTER 8

Vacuum Cooling of Fruits and Vegetables

8.1 Introduction.....	140
8.2 Vacuum Cooling Principle.....	140
8.3 Vacuum Cooling Process	142
8.4 Vacuum Producing Mechanisms.....	143
8.4.1 The Steam Ejector.....	143
8.4.2 Centrifugal System	143
8.4.3 Rotary and Reciprocating	144
8.5 Modelling of Vacuum Cooling Process	145
8.6 Vacuum Cooling Equipment.....	146
8.7 Design of Vacuum Cooling System.....	148
8.7.1 Effective Suction Volume (S_{eff}).....	148
8.7.2 Pumping Time	148
8.7.3 Refrigeration Capacity.....	149

8.8 Applications of Vacuum Cooling for Fruit and Vegetables.....	149
8.9 Hydro-Vac Cooler.....	152
8.10 Advantages of Vacuum Cooling	152
8.11 Disadvantages of Vacuum Cooling.....	153
8.12 Factor affecting Vacuum Cooling Rate.....	154
8.13 Factors affecting Product/Produce Temperature Distribution.....	155
8.14 Factors affecting Vacuum Cooling Loss.....	155
<i>Questions</i>	156
<i>References</i>	156

CHAPTER 9

Handling and Storage of Common Fruits

9.1 Handling and Harvesting.....	158
9.2 Storage and Transportation	159
9.3 Subtropical Fruits.....	168
<i>References</i>	171

CHAPTER 10

Handling and Cold Storage of Vegetables

10.1 Introduction.....	172
10.2 Artichokes, Globe (0 °C and 95 to 100% rh)	172
<i>References</i>	186

Part II: Cold Storage

CHAPTER 11

Moist Air and Applied Psychrometry

11.1 Dalton's Law of Partial Pressures.....	192
11.1.1 Mole Fractions of Component Gases.....	193
11.1.2 Molecular Mass of a Binary Mixture.....	193
11.2 Gibb's Theorem	193

11.3 Psychrometric Properties of Moist Air	196
11.3.1 Specific Humidity	196
11.3.2 Degree of Saturation	197
11.3.3 Relative Humidity	197
11.3.4 Enthalpy of Moist Air	198
11.3.5 Numerical Examples	198
11.4 Cooling by Dehumidification	206
11.5 Psychrometric Chart	209
<i>Problems</i>	214
<i>References</i>	216

CHAPTER 12

Preliminaries for the Estimation of Cooling Loads

12.1 Different Heat Sources	217
12.2 Heat Flow due to Conduction	218
12.3 Sun-Load	220
12.4 Heat Load from Produce	220
12.5 Equipment Load	222
12.6 Infiltration Air-Load	223
12.7 Miscellaneous Heat Sources	223
12.7.1 Duct Heat Gain	223
12.7.2 Fan Load	224
12.8 Moisture Gain through Permeable Walls and Ceilings	225
12.9 Fresh-Air-Load	225
12.10 Design Concept of Air-Conditioning System	226
12.11 By-Pass Factor	229
12.11.1 Importance of Bypass Factor	231
12.12 Latent Heat Process – Humidification or Dehumidification	233
12.13 Total Heat Process	235
12.14 Sensible Heat Factor (SHF)	235
12.15 Methods of Drawing SHF line on the Psychrometric Chart	237
<i>Problems</i>	238
<i>References</i>	238

CHAPTER 13**Air Conditioning Systems and Estimation of Cooling Load**

13.1 Types of Air Conditioning Systems for the Cold Storages	239
13.1.1 All Fresh Air	239
13.1.2 Recirculated Air	240
13.1.3 Recirculated Air with Reheat Coil	243
13.1.4 Recirculated Air used for Heating the Air coming out of the Conditioner	247
<i>Problems</i>	251
<i>References</i>	253

CHAPTER 14**Evaporators**

14.1 Factors Considered in the Design of Evaporators	254
14.1.1 Heat Transfer	254
14.1.2 Materials	255
14.1.3 Velocity	255
14.2 Classification of Evaporators	255
14.3 Extended Surface Evaporators	259
<i>Problems</i>	261
<i>References</i>	261

CHAPTER 15**Refrigerant Compressors**

15.1 Thermo Dynamics of Compression Process	262
15.1.1 Reciprocating Compressors	262
15.1.2 Multi-Stage Compression	264
15.1.3 Capacity Control of Reciprocating Compressors	265
15.1.4 On and Off Control	265
15.1.5 Holding the Valves Open	266
15.1.6 Hot Gas Bypass	266
15.1.7 Using Multiple Units	266

15.2 Centrifugal Compressors.....	266
15.2.1 Capacity Control of Centrifugal Compressors.....	270
15.3 Screw Compressors.....	270
15.4 Rotary Compressors.....	273
15.5 Pressure–Enthalpy Charts.....	274
15.6 Worked out Problems.....	274
<i>Problems</i>	280
<i>References</i>	281

CHAPTER 16

Condensers

16.1 Heat Rejection Ratio.....	282
16.2 Types of Condensers.....	283
16.2.1 Air-cooled Condensers.....	283
16.2.2 Water-cooled Condensers.....	283
16.2.3 Evaporative Condensers.....	284
16.3 Water Side Coefficient.....	285
16.4 Air Side Coefficient.....	286
16.5 Condenser Tubes with Integral Fins.....	286
16.6 Heat Transfer in Condenser.....	286
16.6.1 Condensing Heat Transfer Coefficient.....	287
16.6.2 Outside Horizontal Tube.....	288
16.7 Worked out Problems.....	289
<i>Problems</i>	305

CHAPTER 17

Expansion Devices

17.1 Capillary Tube.....	307
17.2 Thermostatic Expansion Valve.....	310
<i>References</i>	312

CHAPTER 18**Spray Ponds and Cooling Towers**

18.1	Spray Pond	313
18.2	Cooling Towers.....	314
18.3	Classification of Cooling Towers.....	314
18.3.1	Natural Draft Atmospheric Spray Towers	314
18.3.2	Natural Draft Deck – Type Tower.....	315
18.3.3	Forced and Induced Draft Cooling Towers	315
18.4	Performance of Cooling Towers	318
18.5	Maintenance of Cooling Towers.....	323
	<i>Problems</i>	324
	<i>References</i>	324

CHAPTER 19**Fans**

19.1	Types of Fans	325
19.1.1	Propeller Fans	325
19.1.2	Centrifugal Fans	325
19.2	Fan Horse Power and Efficiency.....	326
19.3	Factors Affecting Fan Selection.....	328
19.4	Centrifugal Fan Laws	328
19.5	Performance Curves	330
19.6	Fan Selection.....	331
19.7	General Performance.....	332
19.8	Adoption of Fan to the System.....	337
19.9	Variable Air Volume Method (VAV).....	338
	<i>Problems</i>	340
	<i>References</i>	340

CHAPTER 20**Transmission and Distribution Systems of Cool Air**

20.1	Types of Supply Air Outlets	342
20.2	Factors Considered in Air Distribution System	343
20.3	Consideration for Selection and Location of Outlet.....	345
20.4	Air Distribution	346
20.5	Systems for Injecting the Conditioned Air.....	347
20.5.1	Perforated Ceiling Panels	347
20.5.2	Pan-type Arrangement.....	347
20.5.3	Wall System.....	348
20.6	Air Distribution Methods	348
20.6.1	Upward Flow System	349
20.6.2	Downward Flow or Overhead System.....	349
20.6.3	Ejector Air Distribution System	350
	<i>References</i>	351

CHAPTER 21**Heat and Water Vapour Transport in the Cold Storage**

21.1	Heat Transfer.....	352
21.2	Surface Conductance.....	355
21.3	Solar Air Temperature.....	356
21.4	Air Spaces	357
21.4.1	Effect of Air Space and Insulation.....	359
21.5	Theory of Water Vapour Diffusion.....	361
	<i>Problems</i>	368
	<i>References</i>	369

CHAPTER 22**Thermal and Vapour Insulation Materials**

22.1	Basic uses of Insulation Materials.....	370
------	-----------------------------------------	-----

<i>Contents</i>	(xx)
22.2 Heat Transfer.....	371
22.3 Modern Insulating Materials	372
22.4 Characteristics of Insulation Materials.....	372
22.5 Types of Insulation Materials.....	374
22.6 Insulators made from Natural Materials.....	375
22.7 Insulation Applied to Buildings	376
22.8 Floor Insulation	377
22.9 Low Temperature Cold Storages	377
22.10 Protection against Freezing of the Soil	382
22.11 Roof Insulation.....	383
22.12 Insulation of Pipes and Vessels.....	385
22.13 Thickness of Insulation	386
22.14 Gas-tight Insulation.....	388
22.15 Application Methods of Insulation Materials.....	389
22.16 Wall Insulation.....	392
22.17 Over Pressure Protection.....	397
<i>Problems</i>	402
<i>References</i>	403

CHAPTER 23

Design of Small Capacity Cold Storages

23.1 Comfort Air Conditioning.....	404
23.1.1 Cold Storage Design	405
23.2 Types of Loads in Cold Storages.....	406
23.2.1 Product Load.....	407
23.3 Design of a Pre Cooling for Onions	408
23.5 Special Cases.....	438
<i>Problems</i>	440
<i>References</i>	442

CHAPTER 24

Dimensions–Layout–Stacking Methods for Cold Storage

24.1 Data needed for determining the Dimensions of Cold Storage.....	443
----------------------------------------------------------------------	-----

24.2	Relationship between Length, Width and Height of a Cold Store	446
24.3	General Layout of a Cold Store	447
24.4	Installation of Air Cooling Machinery	448
24.5	Feeding the Evaporators.....	450
24.6	Estimation of Coolents for the Condensers.....	453
24.7	Operation of Cold Rooms	454
24.7.1	Renewal of Air.....	454
24.7.2	Air Circulation.....	454
24.7.3	Air Changes	455
24.8	Stacking Methods.....	456
24.8.1	Block Stacking.....	456
24.8.2	Equipment for Stacking	457
24.8.3	Mobile Rack System.....	458
	<i>Questions</i>	461
	<i>References</i>	462

CHAPTER 25

Transportation of Fruits – Vegetables and Flowers

25.1	Types of Transportation	464
25.1.1	Open Vehicles	464
25.1.2	USDA Portacooler	465
25.2	Stacking Patterns.....	467
25.2.1	Hand-Stacked.....	467
25.3	Cut Flowers Transportation.....	469
25.3.1	Stacking Patterns – Pallet and Slip Sheet Loads	469
25.3.2	Bracing the Load	470
25.3.3	Other Practices	472
25.4	Guidelines for best use of Refrigerated Trailers, Marine Containers and Ships	472
25.4.1	Refrigerated Trucks and Trailers	474
25.5	Refrigerated Transportation Foundation Temperature Limit Ratings for Refrigerated Trailers	477

25.6	Control Systems in the Transport Vehicles.....	479
25.7	Liquid Nitrogen or Liquid Carbon Dioxide Spray	480
25.8	Dry Ice Refrigeration	480
25.8.1	Refrigeration by using Liquid Gases.....	481
25.9	Mechanical Refrigeration with Independent Engine or Electric Motor.....	482
25.10	Marine Refrigeration.....	483
25.10.1	New Refrigeration Ships.....	484
25.11	Bottom Air Delivery System.....	484
25.12	Refrigerated Railway Cars	486
25.13	Air Transportation.....	487
	<i>Questions</i>	489
	<i>References</i>	489

CHAPTER 26

Instrumentation and Climate Management in Cold Storages

26.1	Automatic Control.....	490
26.1.1	Basic Hardware Components.....	491
26.1.2	Steps in Control Action.....	491
26.2	Sensing Elements	491
26.2.1	Electric Resistance Element	493
26.2.2	Bulb and Bellow Element.....	495
26.2.3	Electromagnetic Elements	496
26.3	Pneumatic Actuators	496
26.3.1	Hydraulic Actuators.....	498
26.4	Pressure and Flow Transducers.....	500
26.5	Humidity Sensitive Elements	504
26.6	Actuating Elements	505
26.7	Computer Based Control.....	505
26.7.1	Hardware Configurations.....	508
26.7.2	Digital-to-Analog Converters (DACs).....	508
26.7.3	Analog-to-Digital Converters (ADCs).....	509

26.8	Controls in Refrigeration Equipment	509
26.8.1	High and Low Pressure Cut-outs	510
26.8.2	Capacity Control of Reciprocating Compressors	510
26.8.3	Stepping Motor	511
26.8.4	Electric Motors	511
26.9	Controlling Room Conditions at Partial Load.....	512
26.9.1	On-off Control	512
26.9.2	Bypass Control Using Face and Bypass Dampers.....	512
26.9.3	Varying Flow of Water in Chilled-Water (C-W) Coil.....	514
26.9.4	Reheat Control.....	515
26.9.5	Volume Control	516
26.9.6	Induction System	516
	<i>Questions</i>	517
	<i>References</i>	518

Part III: Controlled Atmosphere for Storage (CAS) Horticulture Produce

CHAPTER 27

Operation, Maintenance and Energy Conservation in Cold Storages

27.1	Refrigerated Storage Plant Operation	521
27.1.1	Checking Temperatures and Humidity	521
27.1.2	Air Circulation	522
27.1.3	Sanitation and Air Purification	523
27.1.4	Removal of Produce from Storage	524
27.2	Energy Conservation.....	524
27.2.1	Minimisation of Solar Gain	525
27.2.2	Building Design Features and Thermal Properties of Construction Materials.....	525
27.2.3	Minimizing Infiltration and Ventilation Load	526

27.2.4 Use of Natural Ventilation for Cooling	526
27.2.5 Equipment Selection	526
27.3 Plant Maintenance	527
References	529

CHAPTER 28

Introductory Information of Controlled Atmosphere Storages

28.1 Gas Regimes	532
28.2 Normal and Subnormal Regimes	532
28.3 Categories of Storages Operated with Controlled Regimes	535
28.4 Methods to maintain desired CO ₂ to O ₂ Ratio in the CA Chamber	536
28.5 Establishment of Gas Regime through Physiological Activity of the Fruit	536

CHAPTER 29

Biochemical Considerations of Controlled Atmosphere Storage

29.1 Metabolic Effects of CA	538
29.1.1 Retarded Respiration	538
29.1.2 Acid Accumulation	539
29.1.3 Acetaldehyde Formation	540
29.1.4 Increase in Sugars	540
29.1.5 Decrease in Alcohol-Soluble and Protein N	540
29.1.6 Pectin Changes	540
29.1.7 Chlorophyll Degradation	541
29.2 Physiological Effects of O ₂ Concentration	541
29.2.1 Varied Ripening Rate	541
29.2.2 Increased CO ₂ Production at very Low or very High O ₂ Tensions	541
29.2.3 Reduced Decay at Low O ₂ levels	541
29.2.4 Fermentation at very Low O ₂ levels	542
29.3 Temperature and O ₂ -C ₂ H ₄ Interrelations	542

<i>Contents</i>	(xxv)
29.4 Physiological Effects of CO ₂ Concentration	542
29.4.1 Altered Climacteric Pattern	542
29.4.2 Off-Flavor Production at High CO ₂	543
29.4.3 Increased pH Reduced Ascorbic Acid Level.....	543
29.4.4 Induction of Some Physiological Disorders	543
29.4.5 Retarded Fungal Growth.....	543
29.5 C ₂ H ₄ – CO ₂ Interaction	544
29.6 Combined Effects of CO ₂ , O ₂ , and Temperature	544
29.7 Humidity and C ₂ H ₄ during Storage.....	544
29.8 Post- Controlled Atmosphere Storage Behavior	545
29.8.1 Long-Controlled Atmosphere Storage Treatment	545
29.8.2 Short-Controlled Atmosphere Storage Treatment	545
29.8.3 High CO ₂ Treatments for Short Periods	545
29.8.4 Short Treatment with very Low O ₂ Level	546
29.9 Carbon Monoxide	546
29.10 Controlled Atmosphere Storage–Produce Consideration	547
29.11 The Devaux Effect	547
<i>References</i>	547

CHAPTER 30

Gas Exchange Mechanisms in Controlled Atmosphere Storage

30.1 Respiration of Fruits and Vegetables.....	549
30.2 Specificity of Fruit Respiration	559
30.3 Diffusion Theory	561
30.4 Film Theory	562
30.5 Liquid-Solid Mass Transfer.....	563
30.6 Homogeneous Reactions	565
30.7 Basic Reaction Theory	565
30.7.1 Reaction Thermodynamics	565
30.8 Reaction Rate.....	568
30.8.1 Measure of Reaction Rate.....	568
30.8.2 Measurement of Reaction Rate.....	569

30.9	Reaction Kinetics.....	571
	<i>Questions</i>	572
	<i>References</i>	572

CHAPTER 31

Mass Balance Principles Applied to CA Chamber

31.1	General Mass Balance Equation.....	574
31.2	Unsteady-state Mass Balance Applied to a Reactor Chamber	576
31.3	Derivation of a Differential Equation using Unsteady State Balance	576
31.4	Mass Balance Applied to Real CA Chamber	579
31.5	O ₂ Concentration in the Chamber under Subnormal Gaseous Medium.....	585
31.6	Determination of Permeability Coefficient of Filters	586
31.7	Determination of Surface Area of Filters	586
	<i>References</i>	587

CHAPTER 32

Gas Generators for Controlled Atmosphere Storage

32.1	Low Cost Methods for Controlled Atmosphere Storage.....	588
32.2	Low Cost CAS for Pallet Loads.....	589
32.3	Ethylene Control	590
32.4	Low Cost CA Plastic Tent for Banana	591
32.5	High Cost Methods for CAS	592
32.6	Controlled Atmosphere Chamber	593
32.7	Gas Generators	594
	32.7.1 Methods for Reducing Percentage of O ₂	595
	32.7.2 Catalyst Burner System	596
	32.7.3 Ammonia Craker Burner System.....	598
32.8	Fuels for Gas Preparation.....	599
32.9	Types of Generators	599
32.10	Efficiency of Generators	604
32.11	Calculation of Pull-Down Time	604

32.12 Factors Affecting Time of Stabilization.....	605
32.13 Design Gas Levels	605
32.14 Air Infiltration Rate (AIR)	606
<i>References</i>	606

CHAPTER 33

Equipment for Producing and Regulating Controlled Atmosphere

33.1 Scrubbers.....	607
33.1.1 Scrubbing CO ₂ with Hydrated Lime.....	608
33.1.2 Scrubbing CO ₂ with Water	609
33.1.3 Scrubbing CO ₂ with Activated Charcoal and other Molecular Sieves	610
33.2 Ethylene Control System.....	610
33.3 Oxygen Control Systems	611
33.3.1 External Gas Generators	611
33.4 Liquid Nitrogen Atmospheric Generators.....	612
33.5 Gas Separator Systems	612
33.6 Hollow-Fibre Membrane Systems (HFM).....	613
33.7 Hypobaric Storage.....	614
33.8 Diffusion Gas Exchanger (Marcellin System)	614
33.8.1 Diffusion Walls.....	616
33.8.2 Construction Details of Diffuser Exchanger.....	616
33.8.3 Primary Instructions for using Diffusion Chamber	617
33.9 Establishment of Gas Regime	617
33.10 Operations required to start the Gas Exchanger.....	617
33.11 Advantages of Diffusion Chamber.....	619
33.12 Pallet Package System	619
33.13 Atmolysair System.....	620

33.14	Automated Control Atmosphere Control Systems.....	620
33.14.1	Control Strategy.....	621
33.14.2	Control Devices	621
33.14.3	PC based Systems	621
33.14.4	Commercial system	622
33.15	Instrumentation for Control Atmosphere Chamber	622
33.15.1	Temperature.....	622
33.15.2	Relative Humidity.....	622
33.15.3	Oxygen Concentration.....	623
33.15.4	Carbon Dioxide Concentration	623
	<i>References</i>	623

CHAPTER 34

Design, Construction and Operation of Controlled Atmosphere Storage Chambers

34.1	Volume Planning.....	624
34.2	Hermetic Sealing and Gas Insulation.....	625
34.2.1	Selection of Gas Impermeable Materials.....	625
34.2.2	Qualities of Gas Insulation Materials	626
34.2.3	Gas Insulation Materials.....	626
34.3	Laying the Gas Insulation Materials	627
34.4	New Methods of Hermetic Sealing-Atmostable Method.....	629
34.5	Tests for Air Tightness of Controlled Atmosphere Storage.....	631
34.6	Determination of Gas Chamber Tightness.....	632
34.7	Instruments for Testing the Air Tightness of Chamber.....	635
34.8	Design and Layouts of Commercial CA Chambers	636
34.9	Air Conditioning Equipment for CAS Chambers	639
34.10	Important Features for Successful Operation of CAS.....	643
34.11	Storage with Normal Gas Mixture	644
34.12	Storage with Subnormal Mixture	644
34.13	N ₂ Management in the CAs.....	645
34.14	Observations for Successful Operation of CAS.....	646
	<i>References</i>	647

Part IV: Modified Atmosphere Storage

CHAPTER 35

An Overview of Modified Atmosphere Storage

35.1 Modified Atmosphere	651
35.2 Modified Atmosphere Packaging (MAP)	651
35.3 Equilibrium Modified Atmosphere Packaging (EMAP).....	652
35.4 Packaging Techniques.....	652
35.5 MAP Gases	652
35.6 Packaging Films	653
35.7 Plastic Films for MAP.....	653
35.8 Packaging Machinery for MAP	653
35.9 Development of Argon MAP	654
35.10 Films for Argon MAP	655
<i>References</i>	655

CHAPTER 36

MAP Technology

36.1 Gases used in MAP	657
36.2 Methods of Creating MA Conditions.....	659
36.3 Techniques to Replace Air in MAP	659
36.3.1 Gas Flushing	659
36.3.2 Compensated Vacuum	660
36.3.3 Active Packaging	660
36.4 Gas Scavenger and Generator Systems.....	662
36.5 Factor to be considered for Selection of Packaging Material	662
36.6 Flexible Packaging Materials	663
36.7 Polyolefins	664
36.8 Methods for Storing Fruits in Polymeric Packets	666
36.8.1 Bag and Tray Systems	667
36.8.2 Individual Seal Packaging (ISP).....	667

36.9	Modified Humidity Packaging of Fresh Horticultural Produce	668
36.10	Estimation of Surface Area of Polymeric Film for MAP.....	669
36.11	Development of Vacuum in Polyethylene Packing.....	671
36.12	Indices of Failure	672
	<i>References</i>	672

CHAPTER 37

Gases and Vapour Applied to MA Processing Operations

37.1	Introduction	674
37.2	Quantity of Gases	674
37.3	P-V-T Relationship for Ideal Gases.....	675
37.4	Gas Mixture.....	677
37.5	Partial Volume.....	677
37.6	Liquid Condensation from Gas Mixtures	680
	<i>References</i>	685

CHAPTER 38

Shelf Life of Foods

38.1	Definition	686
38.2	Shelf Life Dating.....	687
38.3	Factors Controlling Shelf Life	688
	38.3.1 Perishability	688
	38.3.2 Bulk Density	689
	38.3.3 Package Configuration.....	690
	38.3.4 Surface Area-Volume Ratio	690
	38.3.5 Concentration Effects	692
38.4	Distribution Environment.....	692
	38.4.1 Climate.....	692
	38.4.2 Mass Transfer	692
	38.4.3 Heat Transfer	693
38.5	Shelf Life Plots.....	693
	<i>References</i>	695

CHAPTER 39**Kinetic of Food Deteriorative Reactions**

39.1 Introduction	696
39.2 Sensory Quality	697
39.3 Rates of Deteriorative Reactions.....	698
39.4 Zero-order Reactions.....	700
39.5 First-order Reactions	703
39.6 Second order Reactions.....	705
<i>References</i>	723

CHAPTER 40**Water Activity and Shelf Life**

40.1 Introduction	725
40.2 Definitions of Water Activity.....	725
40.3 Sorption Isotherms	728
40.4 Classification of Sorption Isotherms	729
40.5 Measurement of Sorption Isotherm.....	729
40.6 Mathematical models of Sorption Isotherms	730
40.6.1 Langmuir Equation	731
40.6.2 Brunauer-Emmett-Teller (BET) Equation	731
40.6.3 Oswin Model	732
40.6.4 Smith Model	733
40.6.5 Halsey Model.....	734
40.6.6 Henderson Model	735
40.6.7 Henderson Model	735
40.6.8 Guggenheim-Anderson-de Boer (GAB) Model	736
40.6.9 Peleg Model.....	738
40.7 Relationship between a_w – Package Material and Shelf Life	738
40.8 Determination of Critical Moisture Content.....	740
<i>References</i>	754

CHAPTER 41**Effect of Logistics Environment on Shelf Life**

41.1 Shelf Life Plots.....	757
41.1.1 Arrhenius Plot.....	757
41.1.2 Linear Plot	758
41.2 Numerical Example on the use of Shelf Life Plots	760
41.3 Zero Order Reaction Prediction	763
41.4 Numerical Example on Practical Shelf Life (PSL)	765
41.5 Prediction by First Order Reaction	768
References	772

CHAPTER 42**Shelf Life Testing**

42.1 Basic Approach to Determine SL of Food Products	773
42.2 Accelerated SL Testing (ASLT)	774
42.3 Temperature Quotient	775
42.4 Effect of Q_{10} on Shelf Life	776
42.5 Hypothetical Shelf Life Plot.....	778
42.6 ASLT Procedure	779
42.7 Examples of ASLT Procedures	781
42.7.1 Dehydrated Products.....	781
42.7.2 Canned Foods	781
42.8 Problems in the use of ASLT Procedures	781
References	783

CHAPTER 43**MAP Modeling**

43.1 Introduction.....	784
43.2 MAP Modelling	785
43.3 Estimation of Surface Area of Permeable Film	788

43.4 Expression for Film Permeability in terms of Gas Concentration	790
43.5 Graphical Determination of suitable Packaging Film	792
<i>References</i>	795

CHAPTER 44

Principles of Enzyme Kinetics

44.1 Introduction	796
44.2 Michaelis-Menten Kinetics	797
44.3 Determination of Enzyme Kinetic Constants for Batch Data	798
44.4 Lineweaver- Burk Plot	799
44.5 Eadie-Hafstee and Hanes Plots	800
44.6 Hanes plot	801
44.7 Langmuir plot.....	802
44.8 Non-Competitive Inhibition	807
<i>References</i>	811

CHAPTER 45

Enzyme Kinetics Applied to MAP

45.1 Introduction	812
45.2 Respiration Model	813
45.3 Respiration Rate on Function of O ₂ Concentration	813
45.4 Model for Fresh Produce Respiration	815
45.5 Respiration Rate as Function of CO ₂ Concentration	816
45.6 Testing of Model with Permeable Package	818
45.7 Gas Exchange in the Pack	818
45.8 Testing of the Model	821
<i>References</i>	823

CHAPTER 46

MAP Design with O₂ Modelling (Experiments on Tomato Fruit)

46.1 Basic Approach..... 826
References 835

CHAPTER 47

Methods of Storing Fruits in Polymeric Packets with MAP

47.1 Storage in Polyethylene Bags 837
 47.2 Storage in Boxes with Polythene Lining 837
 47.3 Storage in Container with Polythene Lining 840
 47.4 Storage in Polythene Containers with Permeable Packing..... 841
 47.5 Limitations of the Container Method 845
 47.6 Few Experimental Results of MAP with Plastics for Fruits..... 846
 47.7 Consumer Package 846
 47.8 Maximizing MAP Performance..... 848
 47.9 Points of Importance for Highest Performance of MAP 848
Questions 849
References..... 849

Appendix 851
