<i>Acknowledgements</i>	(xi)

Chapter 1

Introduction	1-4
1.1 Scope of this book	3

PART - I : BASICS OF STRUCTURAL ANALYSIS

Chapter 2

Mechanical Properties of Materials	7-18
2.1 Stress	8
2.2 Strain	10
2.3 Hooke's Law, Modulus of Elasticity and Modulus of Rigidity.....	11
2.4 Ductility.....	12
2.5 Poisson's Ratio	12
2.6 Strength.....	13
2.7 Stress-Strain Curve	13
2.8 Factor of Safety	15
2.9 Endurance Strength	16
2.10 Rupture Time.....	16
2.11 Variation of Properties with Temperature	17
2.12 Hardness	17
2.13 Toughness.....	17
2.14 Resilience	18

Chapter 3

Properties of Sections 19-50

3.1 Centroid	19
3.1.1 Centroids of Simple Shapes / Bodies	19
3.1.2 Centroids of Composite Sections	25
3.1.3 Centroids of Solids of Revolution	27
3.1.4 Centroids of Composite Solids of Revolution	29
3.1.5 Pappu's Theorems	29
3.2 Moment of Inertia	31
3.2.1 Moment of Inertia of some Simple Shapes	32
3.2.2 Parallel Axis Theorem	36
3.2.3 Moment of Inertia of Composite Sections	38
3.2.4 Product of Inertia	41
3.2.5 Rotation of Axes	42
3.2.6 Mohr's Circle of Inertia	43
3.2.7 Radius of Gyration	48

Chapter 4

Mechanics of Rigid Bodies 51-68

4.1 Force, Reaction and Moment.....	51
4.2 Resolution of a Force.....	53
4.3 Resultant of Forces	54
4.4 Equations of Equilibrium	55
4.5 Determinate and Indeterminate Structures	57
4.6 Dynamic Analysis	65
4.6.1 D'Alembert's Principle	65
4.6.2 Natural Frequencies and Mode Shapes	66

Chapter 5

Energy Principles 69-80

5.1 Strain Energy	69
5.2 Complementary Strain Energy	71

5.3 Principle of Virtual Displacements.....	71
5.4 Principle of Virtual Forces	72
5.5 Principle of Superposition	77
5.6 Maxwell's Reciprocal Theorem	77
5.7 Unit Load Method	78

Chapter 6

Analysis of Trusses 81-96

6.1 Method of Joints	83
6.2 Method of Sections	86
6.3 Work-Strain Energy Method	90
6.4 Using Castigliano's Theorem	91
6.5 Analysis of Redundant Trusses	92

Chapter 7

Analysis of Continuum Structures 97-130

7.1 Degrees of Freedom (DOF).....	97
7.2 Rigid Body Motion.....	98
7.3 Discrete and Continuum Structures	98
7.4 Material Types.....	99
7.5 Linear Analysis.....	99
7.6 Non-linear Analysis.....	99
7.6.1 Geometric Non-linearity	100
7.6.2 Material Non-linearity.....	100
7.7 Stiffness and Flexibility.....	100
7.8 Stress and Strain at a Point	101
7.9 Principal Stresses.....	104
7.10 Mohr's Circle for Representation of 2-D Stresses.....	106
7.11 Principal Strains.....	108
7.12 VonMises Stress	110

7.13	Theory of Elasticity	111
7.13.1	Rigidity Modulus, Bulk Modulus	111
7.13.2	Strain-Displacement Relations	112
7.13.3	Thermal Stress.....	113
7.13.4	Stress-strain Relations	113
7.13.5	Compatibility Relations	117
7.13.6	Equilibrium Equations	118
7.13.7	Airy Stress Function.....	120
7.14	Theories of Failure	122
7.14.1	Maximum Normal Stress Theory.....	122
7.14.2	Maximum Shear Stress Theory	122
7.14.3	Distortion Energy Theory	123
7.15	Cylindrical and Spherical Shells.....	124
7.15.1	Thin Cylindrical Shells	125
7.15.2	Thin Spherical Shells	126
7.15.3	Thick Cylindrical Shells.....	126
7.15.4	Thick Spherical Shells.....	128
7.15.5	Compound Cylinders	128

PART – II : DESIGN AND ANALYSIS OF AEROPLANE STRUCTURES

Chapter 8

Design Aspects of Aeroplane Structure	133-154
8.1 Main Parts of an Aeroplane	135
8.2 Design of an Aeroplane	143
8.2.1 Stages in the Design of an Aeroplane.....	144
8.3 Perfect Design	145
8.4 Types of Members	147
8.5 Types of Frames	148
8.6 Types of Construction	149
8.7 Designing a Tie.....	149

8.8 Designing a Strut	150
8.9 Designing a Beam.....	151
8.10 Designing a Panel	151
8.11 Structural Index	152

Chapter 9

Basics of Aerodynamics 155-160

9.1 Pressure Distribution over an Aerofoil.....	156
9.2 Resultant Force – Lift and Drag Components	156
9.3 Pitching Moment	159
9.4 Effect of Angle of Attack	160

Chapter 10

Loads on Aeroplane Structure 161-176

10.1 Types of Loads	161
10.2 Aerodynamic Forces.....	161
10.3 Major Aeroplane Weight	164
10.3.1 Center of Gravity Envelope	165
10.3.2 Weight Distribution.....	165
10.4 Gust Loads.....	166
10.4.1 ‘Sharp-edged’ Gust	167
10.4.2 ‘Graded’ Gust	167
10.5 Ground Loads.....	168
10.6 Loads during Manoeuvres	168
10.7 Landing Loads.....	169
10.8 Limit Loads and Ultimate Loads	170
10.9 Weather Effects	170
10.10 Load Factor and Factor of Safety	171
10.10.1 Safe-life Design.....	172
10.10.2 Fail-safe Design	172
10.11 Flight Envelope or V-n diagram.....	173
10.12 Gust Envelope	174

Chapter 11

Analysis of Determinate and Indeterminate Beams **177-234**

11.1	Classification of Beams	177
11.2	Shear Force and Bending Moment	179
11.3	Variation of Shear Force and Bending Moment.....	182
11.4	Theory of Simple Bending	182
11.5	Euler-Bernoulli Beam Theory	184
11.6	Beam Deflection Equation.....	184
11.7	Shear Stresses in a Beam Section.....	186
11.8	Shear Stresses in a Solid (3-D) Continuum	190
11.9	Combined Bending and Axial Loads	191
11.10	Composite or Flitch Beam.....	191
11.11	Analysis of Determinate Beams	192
11.11.1	Deflection by Double Integration Method	192
11.11.2	Deflection by Macaulay's Method	195
11.11.3	Deflection by Moment-Area Method.....	201
11.11.4	Deflection by Energy Method.....	203
11.11.5	Deflection by Conjugate Beam Method.....	205
11.11.6	Solutions for some Determinate Beams.....	209
11.12	Analysis of Indeterminate Beams.....	216
11.12.1	Superposition Method	216
11.12.2	Double Integration Method	222
11.12.3	Slope-Deflection Method.....	223
11.12.4	Moment Distribution Method	225
11.13	Beam of Uniform Stress	229
11.14	Curved Beam	230
11.15	Designing a Beam	231

Chapter 12

Analysis of Shafts **235-254**

12.1 Shaft as a Cantilever	235
12.2 Shear Stress Distribution	235
12.3 Power Transmitted by a Rotating Shaft.....	238
12.4 Shafts of Composite Sections	240
12.5 Shafts in Series and in Parallel	240
12.6 Torsional Strain Energy.....	241
12.7 Combined Bending and Twisting	242
12.8 Warping of Non-circular Sections due to Pure Torsion	243
12.9 Warping of Closed Section Thin-Walled (Hollow) Beams due to Shear and Torsion	250

Chapter 13

Buckling of Columns **255-278**

13.1 Beam Deflection Equation.....	255
13.2 Critical or Euler Load	256
13.3 Column End Fixity	258
13.4 Short Columns	260
13.4.1 Rankine's Formula	262
13.4.2 Johnson's Parabola Formula	262
13.5 Eccentrically Loaded Columns.....	267
13.6 Beam-Columns	268
13.6.1 Beam with Uniformly Distributed Lateral Load and Axial Compressive Load.....	268
13.6.2 Beam with Concentrated Lateral Load and Axial Compressive Load.....	269
13.6.3 Beam with End Moments and Axial Compressive Load	271

13.7 Failure of Columns with Thin Walls	271
13.7.1 Bent-up Sheet Angle Sections.....	272
13.7.2 Channel and Equal-Legged Z-sections	272
13.7.3 Square and Rectangular Tubes with Thin Walls.....	273
13.7.4 General Thin-Walled Shapes	273
13.8 Torsional Instability of Columns.....	274

Chapter 14

Bending and Buckling of Thin Plates **279-322**

14.1 Analysis of Isotropic Flat Plates in Tension	279
14.2 Pure Bending of Thin Plates	280
14.3 Plate Subjected to Bending and Twisting.....	283
14.4 Plate Subjected to a Distributed Lateral Load	284
14.5 Plate Subjected to Lateral Load and In-plane Load	290
14.6 Energy Method for the Bending of Thin Plates	292
14.7 Bending of Plates having a Small Initial Curvature	294
14.8 Elastic Buckling of Isotropic Flat Plates in Compression	295
14.9 Elastic Buckling of Plates due to Shear and Bending Stresses.....	298
14.10 Plastic Buckling of Flat Sheets.....	299
14.11 Columns Subjected to Local Crippling Failure	302
14.11.1 Needham Method.....	304
14.11.2 Gerard Method	304
14.12 Elastic Buckling of Curved Rectangular Plates.....	306
14.13 Stiffened Panels	308
14.14 Pure or Complete Tension Field Beam (Wagner's Theory).....	311
14.15 Incomplete Diagonal Tension-Field Beam.....	317
14.16 Tapered Tension-Field Beam	317

Chapter 15

Shear Flow, Shear Center and Shear Lag 323-368

15.1 Shear Stresses for Bending in One Plane	323
15.2 Bending Moment Applied in a Longitudinal Plane	325
15.3 Relationships between Load, Deflection, Shear Force and Bending Moment	329
15.4 Moments of Inertia for Thin Walled Beams	331
15.5 Bending Stress Distribution in a Thin Walled Z-section	332
15.6 Shear Flow Distribution due to Shear Force	333
15.6.1 Shear Flow in a Thin Walled Open Section Beam	334
15.6.2 Shear Flow in a Thin Walled Closed Section Beam	336
15.7 Shear Flow Distribution due to Torsion	336
15.7.1 Shear Flow in a Thin Walled Closed Section Beam	336
15.7.2 Shear Flow in a Thin Walled Open Section Beam	338
15.8 Shear Flow in Stiffened Shear Webs	339
15.9 Shear Flow in Web with Stringers	341
15.10 Shear Flow due to Bending Load and Torsional Moment	342
15.11 Shear Center	342
15.12 Shear Center Location for Open Sections	343
15.13 Shear Center Location for Single-Cell Closed Sections	352
15.14 Shear Flow in Thin Webs, Enclosed in a Frame of Stiffeners	363
15.15 Shear Lag	365

Chapter 16

Analysis of Aeroplane Fuselage and Wing 369-412

16.1 Analysis of Box Beams – Structural Idealisation	369
16.1.1 Effect of Booms on Shear Flow Distribution	373
16.2 Axial Loads in Booms	381
16.3 Analysis of Closed Section Beams Subjected to Bending	383

16.4	Beams having Variable Stringer Areas	386
16.5	Analysis of Fuselage.....	386
16.6	Analysis of Wings	392
16.6.1	Shear Flow due to Torsion in Multi-Cell Wings	393
16.6.2	Shear Flow due to Bending in Multi-Cell Wings.....	396
16.6.3	Shear Flow due to Shear Force in Multi-Cell Wings	397
16.7	Transverse Frames in Fuselage and Wings	403
16.7.1	Fuselage Frames.....	403
16.7.2	Wing Ribs	404
16.8	Cut-outs in Wings and Fuselage.....	407
16.8.1	Cut-out in Wing	409
16.8.2	Cut-out in Fuselage	411

Chapter 17

Fatigue Analysis **413-422**

17.1	Fluctuating Stress	413
17.2	Fatigue Loads	416
17.2.1	Completely Reversed Stresses	416
17.2.2	Fluctuating Stresses	418
17.3	Fatigue due to Combined Normal and Shear Stresses.....	419
17.4	Fatigue due to Combined Bending and Torsion.....	419
17.5	Some Design Considerations to Minimise Fatigue Damage	420
17.6	Damage per Flight	421

PART - III OTHER RELEVANT TOPICS

Chapter 18

Materials of Aeroplane Construction **425-430**

18.1	Wood	426
18.2	Steel	427
18.3	Aluminium Alloys	427
18.4	Titanium and Lithium Alloys	427

18.5 Composite Materials	428
18.5.1 Properties of Composite Materials	429
18.6 Sandwich Construction.....	430

Chapter 19

Finite Element Method 431-480

19.1 Introduction	431
19.2 Approximate Method Vs Exact Method.....	433
19.3 Principle of FEM	434
19.4 Classification of FEM.....	434
19.5 Basic Steps in Analysis by FEM	435
19.6 Analysis of Discrete Structures	436
19.6.1 Calculation of Element Stiffness Matrix	436
(a) Conditions to be Satisfied by the Displacement Function	438
(b) Spar Element Stiffness Matrix	438
(c) Beam Element Stiffness Matrix	440
19.6.2 Transformation Matrix	442
19.6.3 Assembling Element Stiffness Matrices	444
19.6.4 Boundary Conditions	446
(a) Elimination Method	446
(b) Multi-point Constraints	447
19.7 General Beam Element Stiffness Matrix	448
19.8 Analysis of Thin Plates (2-D Elements).....	454
19.8.1 Analysis of Plates for In-plane Loads	454
(a) Stiffness Matrix of a CST Element	455
(b) Convergence Conditions	458
(c) Aspect Ratio	458
19.8.2 2-D Elements Subjected to Bending Loads	459
19.8.3 Thin Shell Element.....	461
19.9 Isoparametric Elements	463
19.9.1 Stiffness Matrix Calculation by Shape Functions Approach	465
(a) 1-D linear Interpolation for a Truss Element	465
(b) 2-D Linear Interpolation for a Triangular Element.....	466

(c) 2-D Linear Interpolation for a Quadrilateral Element.....	467
(d) 2-D Quadratic Interpolation for a Quadrilateral Element	469
19.10 Distributed Loads	470
19.10.1 Consistent Loads based on Energy	471
19.11 Other Elements for Continuum Analysis.....	472
19.12 Dynamic Analysis	472
19.12.1 Normalisation of Mode Shapes	473
19.12.2 Mass Matrix	474
(a) Lumped Mass Matrix	474
(b) Consistent Mass Matrix.....	475

Chapter 20

Aeroelasticity	481-500
20.1 Infinite Wing Torsional Divergence – 2-D Case.....	482
20.2 Finite Wing Torsional Divergence – 3-D Case	483
20.2.1 Straight Wing with its Flexural Axis Perpendicular to Aeroplane’s Plane of Symmetry	483
20.2.2 Swept Wing Divergence	485
20.3 Aileron Effectiveness and Reversal.....	485
20.3.1 2-D Case (Infinite Wing)	486
20.3.2 3-D Case (Finite Wing)	487
20.4 Flutter	489
20.4.1 Natural Modes of a Lumped Mass System	490
20.4.2 Natural Modes of a Distributed Mass System.....	493
20.4.3 Dynamic Instability or Flutter	496
20.4.4 Classical Flutter.....	497
20.4.5 Critical Flutter Speed	498
20.4.6 Prevention of Flutter	500
References.....	501
Index.....	503
