Contents

Preface ..... (vii)

CHAPTER 1

Historical Background

1.1 Newtonian Mechanics 1
1.2 Black Body Radiation 3
Physical Basis for the Success 6
1.3 The Photoelectric Effect 7
1.4 The Compton Effect 9
1.5 Atomic Spectra 10
1.6 Atomic Models 11
1.7 The Bohr Atom 13
Assumptions 13
Energy of the Electron in the Atom 14
Extensions of the Bohr's Theory 15
Zeeman Effect 16
Spin 17
1.8 Failure of the Old Quantum Theory 17

CHAPTER 2

The Wave Equation

2.1 de Broglie's Concept of Matter Waves 19
Wave length and momentum of a particle 20
2.2 Heisenberg's Uncertainty Principle 22
2.3 Wave Equation 26
2.4 Interpretation of Wave Function 29
2.5 Normalized and Orthogonal Wave Functions 30
2.6 Exercises 31

CHAPTER 3

The Postulates

3.1 The Formulation of Quantum Mechanics 33
Schrödinger Wave Equation 33
3.2 The Postulates of Quantum Mechanics 34
3.2.1 Postulate I 34
3.2.2 Well Behaved Wave Function 35
The Fitness of the Wave Function 36
3.2.3 Postulate II 37
Hermitian Operator 38
3.2.4 Postulate III 41
3.2.5 Postulate IV 42
3.2.6 Postulate V 43
3.3 Exercises 43

CHAPTER 4

Applications of Schrödinger Equation-1

(Simple systems with constant potential energy)

4.1 Particle in a One-dimensional Box 48
4.1.1 Salient Instructive Features of the Problem 51
4.1.2 Zero Point Energy 55
4.1.3 Free Particle 56
4.2 The Particle in a Three Dimensional Box 56
Degeneracy 59
4.3 The Structure of Matter 62
4.4 Factors Influencing Color 64
4.5 Tunneling in Quantum Mechanics 67
Systems with Discontinuity in the Potential Field 69
Hydrogen Transfer Reaction 71
4.6 The Rigid Rotor 72

CHAPTER 5

Applications of Schrödinger Equation-2

(Simple Systems with Variable Potential Energy)

5.1 One-dimensional Harmonic Oscillator 77

Wave functions of the harmonic oscillator 80

5.2 The Hydrogen Atom 82

Polar coordinates 83

Separation of variables 85

The ϕ equation 88

The θ equation 89

Spherical Harmonics 90

The Radial Equation 90

Quantum States 91

Wave Functions of the Hydrogen Atom 92

Hydrogen like Wave Functions 94

The Radial Function 94

The Radial Distribution Functions 95

Show that $r = a_0$ for the 1s orbital 97

The Angular Function $Y_{(\theta,\phi)}$ 98

Nomenclature of p and d Orbitals 99

Nomenclature for d Orbitals 100

CHAPTER 6

Approximation Methods

6.1 Perturbation Theory 101

Perturbation theory consists of a set of successive corrections to an unperturbed problem 103

6.2 The Variational Method 105

Proof 107

6.3 The Hartree Theory 108

Surface of the Atom 108

6.4 Exercises 112

CHAPTER 7

Bonding in Molecules

7.1 Molecular Orbital Theory 115
Hamiltonian operator for H_2^+ and H_2 123
The Stability of Hydrogen Molecule Ion 124
7.2 Valence Bond Theory 127
7.3 Hybridization 131
Linear Structure – $BeCl_2$ 132
Trigonal Planar Structure 134
Tetrahedral Structure 135
Octahedral Complexes 137

CHAPTER 8

Appendix

8.1 SI Units (Système International d'unités) 139
8.2 Derived Units 139
8.3 Supplementary Units 141
8.4 CGS Units 141
8.5 Prefix Dictionary 141
8.6 Experimental Foundation 142
8.7 Calculation of Effective Nuclear Charge 143
8.8 Approximate Orbitals 146
Slater orbitals 146
8.9 Angular Momentum 147
8.10 Laplacian Operator 150
(Conversion from Cartesian to Polar coordinates) 150
8.11 Supplement to Rigid Rotor 151
Associated Legendre function 151
Associated Legendre polynomial 151
8.12 Supplement to One-dimensional Harmonic Oscillator 151
