

CONTENTS

Preface (v)

Chapter 1: Introduction to Health and Epidemiology 1-6

Health, Determinants of Health, Epidemiology, Aims of Epidemiology, Determinants, Clinical Epidemiology, Population and Sampling

Chapter 2: Probability and Epidemiology Study 7-22

Probability for Epidemiological Study, Random Experiment, Trial, Event, Simple and Composite Events, Exhaustive Cases or Events, Mutually Exclusive Event, Equally Likely Cases, Independent Events, Sample Space, Set Theory, Algebra of Sets, Intersection, Disjoint of Sets, Probability, Additional Theorem, Independent Events, Multiplicative Law, Conditional Probability, Joint and Marginal Probability, Baye's Theorem, Sensitivity and Specificity.

Chapter 3: Mathematical Measures and Epidemiological Studies 23-36

Ratio, Proportion, Measurement of Mortality, Mortality Rates and Ratios, Crude Death Rate, Specific Death Rate, Standardized Death Rates, Direct Method, Indirect Method, Measurement of Morbidity, Incidence and Prevalence, Relationship between Prevalence and Incidence, Relative Risk, Odds Ratio, Concordance and Discordance, Analysis-Chi-Square-Mantel Haenszel and Meta-Analysis – Odds Ratio

Chapter 4: Study Design 37-50

Case, Control, Case-control Study, Cohort-study, Cross-sectional Study, Excess Risk, Attributable Risk, Confidence Interval Relative Risk, Randomization, Randomized Controlled Trial, Bias, Selection Bias, Information Bias, To Calculate the RR Using the OR, consider a single binary exposure scenario, Multiplicative Interaction, Additive Interaction.

Chapter 5: Tests of Association between Exposure and Outcome 51-98

Test of Association Between Baseline Variable and Several Discrete Variables, Kaplan – Meier Survival Estimate, Fisher Exact Method, Binomial Distribution, Poisson Distribution, Normal Distribution, Confounding and Interaction, Absolute Risk, Relative Hazard, Testing Association Between Exposure and Outcome Variable, Woolf's Method, Cochran – Mantel – Haenszel Test

Chapter 6: Statistical Hypothesis 99-134

Tests of Significance, Types of Hypothesis, Types of Error in Testing Hypothesis, Level of Significance, P-Values, Testing of Hypothesis, Comparison of Two Proportions, T-Distribution, Interventional Study, Chi-Square Distribution, Continuity Corrections, Regression Analysis, Regression Diagnostics, Multiple regression analysis

Chapter 7: Regression Analysis 135-152

Formation of Simple Regression Equation by Matrix Method, Anova Table for Simple Linear Regression, ANOVA, Model Summary, ANOVA, Coefficients, ANOVA, Model Summary, Association Versus Prediction model in Epidemiology, Regression Diagnostics, Relationship between Variables, Missing Values of Experimental Result, Confidence Interval for Slope (b) and Intercept (a)

Chapter 8: Sample Size Technique..... 153-158

Sample Size Technique, Size of the Random Sample for Specified Precision, General Procedure for Determining Sample Size.

Chapter 9: Logistic Regression Analysis 159-202

Logistic Regression, Linear Model, The Log Linear Model, Simple Linear Model, Probit Model, Interpretation of Coefficient, Measures of Association, Multiple Logistic Regression Model, Likelihood Function, Cox-Regression, Matching, Frequency Matching, Analysis of Matched Studies

CHAPTER 10: Graphs 203-218

Histogram, Pie Charts, Bar Chart, Line Graph, Semilog-Graph, Stem-and – Leaf diagrams

CHAPTER 11: Clinical Trial 219-224

Purpose of Clinical Trials, Phases of Clinical Trials, Safety Report

References..... 225-228
