<i>Preface</i>	(v)
----------------------	-----

PART I

THEORETICAL ASPECTS

CHAPTER 1

Introduction

1.1 Two Major Divisions of Analytical Chemistry	5
1.2 Common Methods in Quantitative Analysis	9
1.3 Working Out Simple Calculations in Quantitative Analysis.....	40

CHAPTER 2

Concentrations of Solutions

2.1 Concentration of a Solution	42
2.2 Expressing the Concentrations of Solutions	43
2.3 Equivalent and Equivalent Weight	49
2.4 Equivalent Weight of a Substance May Vary	61
2.5 Interconversion of Major Concentration Terms	66
2.6 Standard Solution and Standardization	70
2.7 Primary Standard Substance	70
2.8 Secondary Standard Substance	73
2.9 Primary and Secondary Standard Solutions	73
2.10 Practical Considerations for Standardization Based on Titrimetry	74
2.11 Working Out Calculations on Concentrations of Solutions, Equivalent Weight, and Normality, Molarity and Molality of Solutions	77

CHAPTER 3

Basic Principles of Quantitative Analysis

3.1 Reversible and Irreversible Reactions	87
---	----

3.2	Law of Mass Action	88
3.3	Acids and Bases	89
3.4	Conjugate Acid and Conjugate Base	93
3.5	Strong and Weak Electrolytes	94
3.6	Degree of Dissociation of Weak Electrolytes.....	95
3.7	Dissociation Constant of Weak Acids - pK_a	95
3.8	Ostwald's Dilution Law	97
3.9	Solubility Product	99
3.10	Difference Between Solubility Product and Ionic Product.....	100
3.11	Solubility of Sparingly Soluble Salts in Relation to their Solubility Product... ..	100
3.12	Precipitation of Sparingly Soluble Salts	103
3.13	Solubility Product and Common Ion Effect	104
3.14	Applications of Common Ion Effects	104
3.15	Effects of Diverse Ions on the Solubility of Salts	106
3.16	Complex Ions	107
3.17	Ionic Product of Water - The Basis for pH Scale	110
3.18	pH of Strong and Weak Acids and Bases	112
3.19	Buffers	115
3.20	Henderson Hasselbalch Equation	123
3.21	Hydrolysis of Salts	124
3.22	Hydrolysis Constant of Salts	128
3.23	Oxidation Reduction Reactions	138
3.24	Oxidation Reduction Reactions Expressed in Ionic Forms.....	141
3.25	Redox Potential and the Two Component Half Reactions of a Redox Reaction	142
3.26	Oxidation State and Oxidation Number	143
3.27	Balancing Oxidation Reduction Reactions	149
3.28	Working Out Calculations on pH, pK_a , pK_b , Degree of Dissociation, Solubility and Precipitation of Salts, Solubility Product, Preparation and pH of Prepared Buffers.....	153

CHAPTER 4

Titrimetric Analysis

4.1	Essentials of Titrimetric Analysis	172
4.2	Prerequisites for the Reaction Between Titrant and Titrand	174
4.3	Different Kinds of Titrimetry	175
4.4	Indicators in Titrations	176
4.5	Salient Characteristics of an Indicator.....	176
4.6	Different Kinds of Indicators	177

CHAPTER 5

Acid Base Titrimetry

5.1	Indicators for Acid Base Titration	178
5.2	Criteria for Selecting Indicators in Acid Base Titrations.....	182
5.3	Major Classes of Acid Base Indicators.....	186
5.4	Mixed and Screened Indicators	188
5.5	Acid Base Titration Curves	189
5.6	Titration of Polybasic Acids	204
5.7	Indicators for Neutralization of Na_2CO_3 by Strong Acid	208

CHAPTER 6

Nonaqueous Acid Base Titrimetry

6.1	Advantages and Disadvantages Nonaqueous Titrimetry.....	210
6.2	Components of a Nonaqueous Titration	211
6.3	Different Types of Nonaqueous Titrations.....	221
6.4	Preparation of the Titrants of Nonqueous Titrimetry.....	223
6.5	Determination of Pharmaceutical Substances by Nonaqueous Acid Base Titrimetry.	232

CHAPTER 7

Oxidation Reduction Titrimetry

7.1 Common Oxidizing and Reducing Agents	247
7.2 Major Types of Oxidation Reduction Titrimetry	249
7.3 Theory of Oxidation Reduction Titrimetry	255
7.4 Redox Potentials and Equilibrium Constants of Oxidation Reduction Reactions	273
7.5 Formal Potential	280
7.6 Oxidation Reduction Titration Curves	281
7.7 Indicators in Oxidation Reduction Titrimetry	288
7.8 Redox Indicators in Frequent Use	291

CHAPTER 8

Precipitation Titrimetry

8.1 Prerequisites of Precipitation Titrimetry	297
8.2 Precipitation Titration Curves	298
8.3 Precipitation Titration Indicators	301
8.4 Commonly Used Adsorption Indicators.....	312

CHAPTER 9

Complexometric Titrimetry

9.1 Essentials of Complexometric Titrimetry	313
9.2 Complexometric Titrations	317
9.3 Ethylenediaminetetraacetic Acid (EDTA)	319
9.4 Conditional Formation Constant (K'_f) Further Reduced by More Than One Complexing Agent.....	328
9.5 Complexometric Titration Curves	330
9.6 Other Polydentate Ligands	334
9.7 Types of Complexometric Titrations	338
9.8 Complexometric Titration Indicators	343

9.9	Complexometric Titrations Without Metal Ions' Specific Indicators.....	351
9.10	Complexometric Titration Indicators in Wide Use	353
9.11	Use of Redox Indicators in Complexometric Titrations	360
9.12	Screening Effect of Complexometric Titration Indicators	361

PART II

STANDARD SOLUTIONS

CHAPTER 10

Primary and Secondary Standard Solutions

10.1	Standard Solution	365
10.2	Primary Standard Substances	365
10.3	Primary Standard Solution	366
10.4	Secondary Standard Solution	367

CHAPTER 11

Preparation of Standard Solutions

11.1	Standard Hydrochloric Acid Solution.....	369
11.2	Standard Sulfuric Acid Solution	386
11.3	Standard Nitric Acid Solution	389
11.4	Standard Acetic Acid Solution	391
11.5	Standard Sodium hydroxide Solution	395
11.6	Standard Potassium permanganate Solution	397
11.7	Standard Sodium thiosulfate Solution	410
11.8	Standard Iodine Solution	417
11.9	Standard EDTA Solution	425
11.10	Standard Silver nitrate Solution	430
11.11	Standard Ammonium and Potassium thiocyanate Solution.....	436
11.12	Standard Bromine Solution	440
11.13	Standard Ferrous sulfate Solution	444

11.14	Standard Potassium ferrocyanide Solution	447
11.15	Standard Stock Solutions of Some Metal and Nonmetal Ions	450

PART III

INSTRUMENTAL METHODS OF ANALYSIS

CHAPTER 12

Colorimetry and UV-Visible Absorption Spectrophotometry

12.1	Electromagnetic Radiation	462
12.2	Theory of Colorimetry and Absorption Spectrophotometry	465
12.3	Deviations from Beer's Law	472
12.4	Applications of Beer-Lambert Law	474
12.5	Instrumentation - Component Parts of a Colorimeter / Absorption Spectrophotometer	478
12.6	Commercial Instruments	486

CHAPTER 13

Flame Photometry

13.1	Principle of Flame Photometry	492
13.2	Low Population of the Excited Atoms – Limited Application of Flame Photometry	495
13.3	Instrumentation	497
13.4	Advantages and Limitations of Flame Photometry.....	500
13.5	Determination by Flame Photometry	500

CHAPTER 14

Atomic Absorption Spectrophotometry

14.1	Principle of Atomic Absorption Spectrophotometry	503
------	--	-----

14.2 Instrumentation	506
14.3 Single and Double Beam Atomic Absorption Spectrophotometer	513
14.4 Interferences in Atomic Absorption Spectrophotometry	514
14.5 Sample Preparation	518
14.6 Calibration of the Instrument	520

CHAPTER 15

Potentiometry

15.1 Theory of Brief	521
15.2 Applications of Potentiometry	522
15.3 Direct Potentiometry and Potentiometric Titrations	523
15.4 Measuring Set-up in Potentiometry	524
15.5 Common Electrodes in Potentiometry	527
15.6 Working of a pH Meter – A Potentiometer.....	535
15.7 Potentiometric Titrations	538
15.8 Salient Aspects of Potentiometric Titrations	539
15.9 Titration Curves and Equivalence Point Detection in Potentiometric Titrations	541
15.10 Gran's Plot	545
15.11 Potentiometric Titration - Illustration of Data Processing for Equivalence Point Titrant Volume	546
15.12 Advantages of Potentiometric Titrations	549
15.13 Disadvantages of Potentiometric Titrations	549
15.14 Experiments on Potentiometric Titrations	549

CHAPTER 16

Polarography

16.1 Theory of Polarography	555
16.2 Advantages and Disadvantages of Polarography	557
16.3 Basic Set-up of a Polarographic Analysis and the Polarograms	557

16.4	Dropping Mercury Electrode (DME) – Advantages, Disadvantages, and Care and Maintenance	563
16.5	Polarographic Currents	566
16.6	Ilkovic Equation	568
16.7	Half-wave Potential	570
16.8	Polarographic Analysis - Generalized Experimental Protocol	574
16.9	Detection and Quantification by Polarography	578
16.10	Successive Determinations of A Series of Substances and their Chemically Altered Derivatives by their Half-wave Potentials	583
16.11	Half-wave Potential of A Complex Ion	584
16.12	Removal of Dissolved Oxygen in Polarographic Analysis	586
16.13	Applications of Polarography	588
16.14	Polarographic Analysis – Two Specific Determinations	588

PART IV

ERRORS IN QUANTITATIVE ANALYSES

CHAPTER 17

Errors in Analyses - Evaluation and Minimization

17.1	Errors in Analysis	597
17.2	Classification of Errors in Analysis.....	598
17.3	Precision and Accuracy of An Analysis	601
17.4	Quantification of Precision of An Analysis	602
17.5	Quantification of Accuracy of An Analysis	607
17.6	Discarding a Replicate Result of An Analysis	608
17.7	Distribution of the Results of An Analysis	610
17.8	Comparing the Results of An Analysis	612
	<i>Appendix</i>	617
	<i>Laboratory Safety and Work Ethics</i>	631
	<i>Index</i>	635
