Preface	(vii)
Acknowledgements	(ix)

Chapter 1: Transmission Line Analysis

1.1 Introduction	1
1.2 Concepts of a Transmission Line	1
1.3 Performance of Transmission Lines	1
1.4 Classification of Transmission Lines	2
1.5 Analysis of Short Transmission Lines	3
1.6 Analysis of Medium Transmission Lines.....	4
1.6.1 Load Condenser Method.....	5
1.6.2 Source Condenser Method.....	6
1.6.3 Nominal T–Method.....	7
1.6.4 Nominal– π Method	10
1.7 Impedance of Transmission Line for Open Circuit Condition & Short Circuit Condition	13
1.8 Conditions for Zero Voltage Regulation and Maximum Voltage Regulation of a Transmission Line	14
1.9 Relation between Actual Loading of Transmission Line and Surge Impedance Loading.....	17
1.10 Interconnection of Transmission Line.....	23
1.10.1 Transmission Lines Connected in Cascade.....	23
1.10.2 Parallel Connection of Transmission Lines	24
Objective Questions.....	25

Chapter 2: Per Unit Quantities

2.1 Introduction	27
2.2 Per Unit Representation of Power System Components	27
2.2.1 Absolute System of Analysis	27
2.3 Expressing Per Unit Reactance in Terms of Base Voltage and Base Current.....	28
2.4 Expressing Per Unit Reactance in Terms of Base Volt Ampere and Base Voltage	29

2.5 Expressing Base Reactance (Ω) in Terms of Base VA and Base Current..... 30

2.6 Expressing $X_{p.u., new}$ in terms of $X_{p.u., old}$ 30

Objective Questions..... 35

Chapter 3: Graph Theory

3.1 Introduction..... 39

3.2 Definitions..... 40

3.3 Incidence Matrices 41

 3.3.1 Element-Node Incident Matrix $[\bar{A}]$ 41

 3.3.2 Bus Incidence Matrix (A) 41

 3.3.3 Branch Path Incidence Matrix (K)..... 42

 3.3.4 Basic Cutset Incidence Matrix [B]..... 44

 3.3.5 Augmented Cut-Set Incidence Matrix $[\bar{B} \text{ or } \hat{B}]$ 45

 3.3.6 Basic Loop Incidence Matrix (C) 46

3.3.7 Augmented Loop Incidence Matrix (\bar{C}) 47

Objective Questions..... 67

Chapter 4: Admittance Bus Matrix

4.1 Introduction..... 71

4.2 Representation of Network Components 72

4.3 Formation of Network Matrices by Singular Transformation..... 73

 4.3.1 Network Performance Equations 73

 4.3.2 Bus Admittance Matrix..... 74

4.4 Formulation of $[Y_{Bus}]$ for an Interconnected Network 75

4.5 Properties of $[Y_{Bus}]$ 77

Objective Questions..... 91

Chapter 5: Impedance Bus Matrix

5.1 Introduction..... 93

5.2 Calculation of Impedance Matrix without Mutual Coupling between the Transmission Lines..... 93

5.3 Performance Equations of Partial Networks 102

5.4 Determination of Z_{bus} by Considering Mutual Coupling between the Elements..... 103

 5.4.1 Addition of a Branch..... 103

 5.4.2 Addition of Link 106

Objective Questions..... 115

Chaper 6: Load Flow Analysis

6.1 Introduction..... 119

6.2 Classification of Buses..... 120

6.3 Determination of Static Load Flow Equations 122

6.4 Voltage at i^{th} Bus..... 123

6.5 Determination of Power Transmission in the Load Flow Analysis 124

6.6 Numerical Methods..... 125

 6.6.1 Gauss Seidal Method 125

 6.6.2 Newton Raphson Method 132

 6.6.3 Decoupled Load Flow Method 141

 6.6.4 Fast Decoupled Load Flow Method..... 141

Objective Questions..... 150

Chapter 7: Fault Analysis

7.1 Introduction..... 157

7.2 Reactance Control of Short Circuit Currents 159

 7.2.1 Generator Reactors 159

 7.2.2 Feeder Reactors 160

 7.2.3 Bus Bar Reactors 160

7.3 Short Circuit Capacity or Fault Level of a Bus..... 161

Objective Questions..... 178

Chapter 8: Symmetrical Components

8.1 Introduction..... 183

8.2 Classification of Unbalanced Systems 184

8.3 Significance of Operator ‘k’ or ‘a’ or ‘ α ’ 184

8.4 Per Unit Neutral Current 187

8.5 Method of Connections between Neutral and
Ground of a Three Phase Star Connected Alternator 188

8.6 Zero Sequence Networks of Transformers.....	188
8.7 Sequence Networks of an Alternator Operating under No Load Condition	192
8.8 Reactance offered by Alternator during Fault.....	193
Objective Questions.....	196

Chapter 9: Unsymmetrical Fault Analysis

9.1 Introduction.....	199
9.2 Classification of Faults.....	199
9.3 Line to Ground Fault Analysis (L-G Fault).....	201
9.4 Line to Line Fault Analysis (L-L Fault).....	205
9.5 Line to Line to Ground Fault Analysis (L-L-G Fault)	209
Objective Questions.....	226
Unsolved Problems	227

Chapter 10: Symmetrical Fault Analysis

10.1 Introduction.....	231
10.2 Line–Line–Line Fault (LLL).....	231
10.3 Representation of Positive X_{1eq} , Negative X_{2eq} and Zero Sequence X_{0eq} Reactances in terms of Self-Reactance, X_s and Mutual Reactance, X_m of Transmission Line.....	234
Solved Questions.....	236
Objective Questions.....	245

Chapter 11: Power System Stability Analysis

11.1 Introduction.....	247
11.1.1 Power System Stability.....	248
11.1.2 Classification of Power System Stability.....	248
11.2 Methods to Determine Steady State Stability.....	249
11.2.1 Static Model.....	249
11.2.2 ABCD Constants	252
11.2.3 Methods to Improve Steady State Stability	257
11.2.4 Determination of Transfer Reactance	258
11.3 Analysis of Transient Stability.....	258
11.3.1 Conditions for Which Power Transmitted during Fault in Zero.....	258
11.3.2 Dynamic Model	259

11.4 Analysis of Steady State Stability using Swing Equation 261

11.5 Analysis of Transient Stability Based on number of Synchronous Machines 263

11.6 Swinging of Synchronous Machines..... 265

 11.6.1 Coherent Swinging of Synchronous Machines..... 265

 11.6.2 Non-Coherent Swinging of Synchronous Machines..... 266

11.7 Equal Area Criterion Method 268

11.8 Applications of Equal Area Criterion Method 269

 11.8.1 Sudden Increase in Mechanical Input to a Synchronous Generator 270

 11.8.2 Sudden Increase in Mechanical Output of a Synchronous Motor 272

 11.8.3 Removal of one of the Parallel Transmission Lines
 Forcibly using Fast Acting Circuit Breakers 274

 11.8.4 Occurrence of Fault at the Middle of
 One of the Parallel Transmission Line..... 277

 11.8.5 Occurrence of Fault on one of the Parallel Transmission
 Lines near Bus Bar..... 281

 11.8.6 Occurrence of Fault on Bus Bar 284

 11.8.7 Critical Clearing Time, t_c 286

11.9 Step by Step Method or Point by Point Method..... 287

Solved Problems..... 289

Unsolved Problems 300

Objective Questions..... 301

Chapter 12: Voltage Control and Power Factor Improvement Methods

12.1 Introduction..... 303

 12.1.1 Sign of the Net Reactive Power..... 304

 12.1.2 Approximate Expression for Voltage at the
 Receiving End of Transmission Line..... 306

 12.1.3 Reactive Power Balance Equation..... 307

12.2 Shunt Capacitor / Power Factor Improvement Device..... 308

12.3 Shunt Inductor..... 312

12.4 Series Capacitor / Power System Stability Device..... 316

12.5 Comparison between Shunt Capacitor and Series Capacitor 320

12.6 Synchronous Inductor and Synchronous Capacitor 321

12.7 Synchronous Phase Modifier / Phase Advancers 322

Key Points 324
Solved Problems..... 325
Unsolved Problems 333
Objective Questions..... 333

Chapter 13: MATLAB Programming

13.1 Y_{Bus} Formation by Inspection Method 335
 13.2 Y_{Bus} Formation by Singular Transformation Method without Mutual Coupling 336
 13.3 Y_{Bus} Formation by Singular Transformation Method with Mutual Coupling 339
 13.4 Formation of Y-Bus Matrix..... 341
 13.5 Formation of Y-Bus Matrix using Bus Building Algorithm 342
 13.6 Formation of Z-Bus Matrix using Bus Building Algorithm – 1..... 344
 13.7 Formation of Z-Bus Matrix using Bus Building Algorithm – 2..... 345
 13.8 Determination of Bus Currents, Bus Power and Line Flows for a Specified Bus System Profile 349
 13.9 Calculation of ABCD Parameters 351
 13.10 Determination of Power Angle Diagram for MATLAB Program 357
 13.11 Determination of Swing Curve 360
 13.12 Jacobian Matrix Calculation 362
 13.13 MATLAB Program to Solve Load Flow Equations using Gauss-Seidel Method with PQ Buses 364
 13.14 Load Flow Analysis by Gauss-Seidal Method 367
 13.15 Newton Raphson Load Flow Method using MATLAB..... 369
 13.16 Fast Decoupled Power Flow Model using MATLAB..... 372
 13.17 LG, LL, LLG Fault Analysis..... 374
 13.18 Solution of Swing Equation by Point by Point Method 394

Solutions 397
