

CONTENTS

<i>Foreword</i>	(vii)
<i>Preface</i>	(ix)
<i>Acknowledgement</i>	(xi)
CHAPTER - 1	
Introduction	
1.1 Introduction.....	1
CHAPTER - 2	
Purpose of Silos	
2.1 Requirements of Storage Silo Structures	3
CHAPTER - 3	
Brief Historical Development	
3.1 Developments in Design and Construction Approaches	5
CHAPTER - 4	
Materials Properties - Their Influences on the Flowability	
4.1 Introduction.....	7
4.2 Properties of Materials.....	7
4.3 Type of Materials	7
4.4 Material Flow in Silos	7
CHAPTER - 5	
Types of Silos	
5.1 Based on Shape	15

(xiv) *Contents*

5.2	Based on Material of Construction	15
5.2.1	Wood and Masonry Construction Storages	16
5.2.2	Reinforced Concrete Silos	16
5.2.3	Pre-stressed Concrete Silos	16
5.2.4	Structural Steel Silos	16
5.3	Based on Size and Capacity	17

CHAPTER - 6

Standard Silos

6.1	Categories of Silos	19
6.1.1	Flat Bottomed Continuous Blending Silos	19
6.1.2	Inverted Cone Bottom Silos	22
6.1.3	Flat Bottom with Concrete Fill-in ‘Hopper Shaped’ Storage Silos	22
6.1.4	Aeration Pressures during Extraction	23
6.1.5	Homogenizing Silos	23
6.2	Basic Geometry of silos	24
6.3	Large Openings at Ground Level in Silo Bottom Wall	24
6.4	Sizing of the Silos	24
6.5	Selection of the Number of Silos and their Size	25
6.6	Factors Influencing the Geometry	25
6.6.1	Silos Comparison	26
6.6.2	Further Comparison	26
6.6.3	General Observations While Working out with Parametric Variations	28
6.7	Comparison of Flat Bottom Silos with Cone Bottom Silos	29
6.7.1	Pros and Cons of Flat Bottom Silos with those having Inverted Cone bottom	29
6.7.2	Quantitative Comparison for a Typical Cone Bottom and Flat Bottom Silos	30

CHAPTER - 7

Silos Loads - Current Codal Recommendations

7.1	Indian Silo code BIS 4995 - 1974 (Reaffirmed 1998) Part I &Part II	35
7.2	American Silo Code ACI 313-97	40
7.3	Eurocode EN 1991-4: 2006	43
7.3.1	Inputs Required for Silo Design	44
7.4	BS Eurocode -- BSEN 1991-4: 2006. British NDPs	56
7.4.1	Classification of Silos for Action Assessments	56
7.4.2	Eccentric Discharge Radii Parameters	56
7.5	Factors that Increase Silo Pressures and Forces	56

CHAPTER - 8

Load Combinations and Load Factors

8.1 Discharge Loads for Circular Silos with Large Outlet Eccentricities 59

8.2 Temperature Loads 59

8.3 Silo Structure and Foundation 59

8.4 Silo Wall and the Bottom 60

 8.4.1 Horizontal Pressures 60

 8.4.2 Silo Wall Vertical Load (Including Wall Frictional Pressures) 60

 8.4.3 Silo Bottom 60

 8.4.4 Load Combinations for Seismic Design Situations 60

CHAPTER - 9

Silo Structural Elements - Design Guide Lines

9.1 Silo Roof 63

 9.1.1 Wall and Roof Connection 65

9.2 Silo Walls 65

 9.2.1 Reinforced Cement Concrete Walls 66

 9.2.2 Pre-Stressed Concrete Walls 68

 9.2.3 Shear Forces in Silo Walls 71

 9.2.4 Vertical Compression Stresses in Walls 71

 9.2.5 Thermal Considerations 72

 9.2.6 Crack Width 74

 9.2.7 Results of Analysis - Typical Cone Bottom Silo as per Euro Code 75

 9.2.8 Geometry of the Silo for Comparative Study 76

9.3 Silo Bottom 77

 9.3.1 Flat Slab on Columns or Walls 77

 9.3.2 Conical Bottom and Ring Beam Silo 79

 9.3.3 Inner Columns and Walls Supporting Flat Bottom Silos 81

 9.3.4 Thermal Moments in Silo Bottom Slabs or Cones 81

9.4 Silo Bottom Walls 81

9.5 Openings in Bottom Walls 82

 9.5.1 Truck Entry Openings 84

9.6 Design of Deep Beams across Openings 85

9.7 Secondary Floors below Silo Bottom 87

9.8 Foundations 87

CHAPTER - 10

Analysis and Design

10.1 Silo Elements 91

10.2 Analysis and Design 91

CHAPTER - 11

Additional Effects in Silos and their Considerations

11.1 Honking, Quaking and Vibrations	93
11.2 Dust Explosions	94
11.3 Thermal Ratcheting	94

CHAPTER - 12

Earthquake Effects

12.1 General	97
12.2 Silo Structure	97
12.3 Silo Material Pressures	97

CHAPTER - 13

Special Silos

13.1 Clinker Silos	99
13.1.1 Geometry and Functional Requirements	100
13.1.2 Foundation Systems	102
13.1.2.1 SBC is high at shallow depth say 3.0 to 4.0 m depth	103
13.1.2.2 SBC is medium at depth say 3.0 to 5.0 m depth	103
13.1.2.3 SBC is low	104
13.2 Compartment Silos	104
13.2.1 Design Considerations	106

CHAPTER - 14

Reinforcement Detailing in Silos

14.1 Reinforcement Steel Detailing	109
14.2 Pre-stressing (post-tensioning) Steel Detailing	118
14.3 Post - Tensioning (PT) and Reinforcement Steel Design	118

CHAPTER - 15

Construction Aspects

15.1 Slip-Forming and Concreting	121
15.1.1 Method / Procedure Statement	121
15.1.2 Concrete Mix, Quality and Workability	122
15.1.3 Reinforcement Steel and Post –tensioning Cables	123
15.1.4 Guidelines and Requirements for Sliding Work	123
15.1.5 Supervision	124
15.1.6 Treatment of unforeseen Sliding Stops, Construction Joints	124

15.2 Construction Tolerances	124
15.3 Defects Observed During Slip-forming	124
15.4 Silo Water Proofing	125

CHAPTER - 16

Failures of Silos

16.1 Design Errors	127
16.2 Construction Errors	127
16.3 Utilization Errors	128
16.4 Modifications Errors	128
16.5 Foundation Errors	128
16.6 Failure of Silos in Cement Plants – Past Indian Cases	128

CHAPTER - 17

Strengthening of Silos

17.1 General	131
17.2 Rectification and Strengthening Measures	132
17.2.1 Rectification Measures	132

CHAPTER - 18

Steel Silos (As per EN 1993-4-1: 2007 and EN 1993-1-6: 2007)

18.1 General	133
18.2 Design Aspects	133
18.3 Reference Codes	134
18.4 Consequence Classes of Silos	134
18.5 Steel Properties	135
18.6 Allowance for Corrosion and Abrasion	135
18.7 Design situations to be considered	135
18.8 Stored Material Properties	135
18.9 Steel Properties	135
18.10 Design Considerations	136
18.10.1 Load Factors and Load Combinations	136
18.11 Material Properties and their Influences on their Flowability	137
18.12 Guidance for initial determination of Silo wall plate thicknesses	137
18.13 Evaluation of Design Stress Resultants	137
18.14 Thermal Ratcheting Stresses	138
18.15 Wind Loads on Shell	138

(xviii) Contents

18.16	Buckling under Axial Compression	139
18.17	Buckling under External Pressure, Internal Partial Vacuum and Wind	140
18.18	Membrane Shear	141
18.19	Interaction between Meridional Compression, Circumferential Compression and Membrane Shear	141
18.20	Buckling under External Pressure, Partial Vacuum or Wind	141
18.21	Discretely Supported Shell Walls	141
18.22	Imperfections in the Fabrication and eErection	141
18.23	Silo Supported on Columns	144
18.24	Transiton at Junction of Cylider and Hopper	144
18.25	Anchorage at the Base of the Silo	146
18.26	Base Ring	146
18.27	Openings in Silos	146
18.28	Deflections of Silos	146
18.29	Design of Conical Hoppers with Half Angles in the Range $00 < \hat{\alpha} < 700$	147
18.30	Steep Hoppers	148
18.31	Shallow Hoppers	148
18.32	Hopper Design	149
18.33	Treatment of Concentrated Loads Due to Roof Beams	149
18.34	Analysis	149
18.35	Fabrication Quality and Tolerances	150

CHAPTER - 19

Design Examples

19.1	Design of a 12m dia. cement silo (1966 Dalla - UP)-- Based on "Faber and Mead" method.	151
19.2	Design of Alumina Silo Wall as per Indian Silo Code BIS 4995 – 1974 (Reaffirmed 1998) Part I &II	153
19.3	Design of Cement Silo Chamber Wall as per American Silo Code – ACI 313-1997	160
19.4	Design of 16M DIA. Cement Silo (Cone bottom) as per DIN 1987	166
19.5	Design of 40M DIA. Clinker Silo Wall as Per Euro Code BS EN 1991-1-4: 2006. (BS Annexures)	171
19.6	Steel Silo Design Example As Per EN 1991-4: 2006 EN 1993-4-1:2007 and EN 1993-1-6: 2007	183
