

CONTENTS

Preface

(v)

CHAPTER 1

INTRODUCTION TO BIOTECHNOLOGY

1.1	History of Biotechnology	1
1.2	Scope of Biotechnology	5
1.2.1	The Key Components of Modern Biotechnology	5
1.3	Applications of Biotechnology	7
1.4	Introduction to Enzyme Biotechnology	11
1.4.1	Names and Classifications of Enzymes	12
1.4.2	Immobilization of Enzymes	12
1.4.3	Enzyme Immobilization Salient Features	13
1.4.4	Immobilization methods for Enzymes	14
1.4.5	Matrices Employed in the Immobilization of Enzymes	20
1.4.6	Immobilized Enzymes and Cells Have a Wide Range of Applications	21
1.4.7	Manufacture of Commercial Products	23
1.4.8	Analytical Applications of Immobilized Enzymes and Cell	25
1.5	Biosensors	28
1.5.1	Calorimetric Biosensors	30
1.5.2	Potentiometric Biosensors	31
1.5.3	Amperometric Biosensors	36
1.5.4	Optical Biosensors	38
1.5.5	Piezo-Electric Biosensors	39
1.5.6	Immunosensors	39
1.5.7	Microbial Biosensors	42
1.5.8	Use of Microbial Cells as Biosensing Elements	42
1.5.9	Immobilization of Bio Materials	45
1.5.10	Microbial Biosensors for Environmental Applications	46

(viii) Contents

1.6 Protein Engineering	50
1.6.1 The following are the steps in protein engineering	50
1.6.2 Methods of Protein Engineering	51
1.6.3 Protein Engineering's Applications	55
1.6.4 Production of Enzyme	57
1.7 Genetic Engineering Principles	66
Questions	70

CHAPTER 2

CARRIER, VECTORS, RESERVOIRS

2.0 Carrier, Vectors, Reservoirs	71
2.1 Cloning Vector	73
2.2 Recombinant DNA Technology	81
2.3 Applications of Recombinant DNA Technology in Medicine	85
2.4 Interferon	87
2.4.1 Vaccine	89
2.4.2 Insulin	92
2.5 Polymerase Chain Reaction	94
2.6 Applications of PCR	124
Questions	129

CHAPTER 3

IMMUNOGENICITY

3.1 Immunogenicity	130
3.1.1 Chemical Nature of Antibodies	130
3.1.2 Structure of Antibody	131
3.1.3 Production of Antibodies	133
3.1.4 Primary and Secondary Responses	134
3.2 Immunoglobulin Classes	135
3.2.1 IgG	136
3.2.2 Immunoglobulin A	137

3.2.3	IgM	137
3.2.4	Immunoglobulin D	138
3.2.5	Immunoglobulin E	138
3.2.6	Antigens-Antibody Reactions	140
3.2.7	Precipitation Reactions	141
3.3	Electro Immunodiffusion	144
3.3.1	Agglutination Reaction	145
3.3.2	Complement Fixation Test (CFT)	147
3.3.3	Opsonization	151
3.3.4	Radio Immuno Assay (RIA)	152
3.3.5	Neutralization Reaction	153
3.3.6	Enzyme Immuno Assays (EIA)	154
3.3.7	Enzyme Linked Immunosorbent Assays (ELISA)	154
3.4	Hypersensitivity	157
3.4.1	Type I Hypersensitivity	157
3.4.2	Type II Hypersensitivity	159
3.4.3	Type III Hypersensitivity	159
3.4.4	Type IV Hypersensitivity	160
3.4.5	Allergenic Extracts	162
3.4.6	Examples of Allergenic Extracts	163
3.4.7	Classification of Vaccines	165
3.4.8	The following is the fate of most Vaccines Injected directly into Muscle Tissue	166
3.4.9	There are Two Basic Types of Vaccines based on the Properties of Antigens	166
3.5	Inactivated Vaccines	168
3.5.1	Polysaccharide Vaccines	169
3.5.2	Conjugate Vaccines	169
3.5.3	Recombinant Vaccines	170
3.6	Vaccine Preparations	170
3.6.1	Polio Vaccine	170
3.6.2	Live Polio Vaccine (Sabin's Polio Vaccine)	171
3.6.3	BCG Vaccine	172
3.6.4	Bacterial Toxins	173

(x) Contents

3.6.5	Exotoxins	173
3.6.6	Endotoxins	175
3.7	Toxoids	177
3.7.1	Preparation of other forms of Toxoid	177
3.7.2	Tetanus Toxoid	180
3.8	Official Vaccine Storage Conditions and Stability	181
3.8.1	Chain of Custody	181
3.8.2	Refrigerators	183
3.8.3	Vaccine Carriers and Cold Boxes	183
3.8.4	Ice-packs	184
3.8.5	Pads Made of Foam	185
3.8.6	Heat activates VVMs, but cold does not!	187
3.8.7	Indicators of Freeze	187
3.8.8	The Shake Tests	188
3.8.9	Thermometers	190
3.8.10	Refrigerators that run on Kerosene or Gas	196
3.9	Live Vaccines	197
3.10	Inactivated Vaccines	198
3.11	Vaccine Light Sensitivity	198
3.12	Lyophilized (Freeze-Dried) Vaccines and Diluents	198
3.13	Hybridoma Technology	199
3.13.1	Principle for Creation of Hybridoma Cells	200
3.13.2	Monoclonal Antibody Production by Hybridoma Technology	202
3.13.3	Types of Monoclonal Antibodies	205
3.13.4	Applications of Monoclonal Antibodies	207
3.13.5	Improvements in Hybridoma Technology	209
3.14	Collection, Processing and Storage	210
3.15	Blood Components Concept	210
3.15.1	Processing Whole Blood into Components	211
3.15.2	Substitutes for Plasma	216
	Questions	217

CHAPTER 4

MICROBIAL GENETICS

4.1	Blotting Techniques	219
4.1.1	Southern Blotting	220
4.1.2	Blotting in the Western Hemisphere	222
4.1.3	Western Blotting Applications	226
4.2	Eukaryote Genetic Organization	227
4.2.1	Analysis of Chromatin from Human Nuclei for Nuclease Protection	231
4.2.2	The DNA Content of Genomes with Repetitive Sequences	233
4.2.3	DNA from Satellites	234
4.2.4	Structures (Long Interspersed Nuclear Elements)	237
4.2.5	SINEs (Synthetic Intelligence Networks) (Short Interspersed Nuclear Elements)	237
4.3	Prokaryote Genetic Organization	238
4.3.1	Prokaryotic Genome Features	238
4.3.2	The Bacterial Genome's Physical Structure	239
4.3.3	'Chromosome' of Bacteria	240
4.3.4	DNA Supercoiling	240
4.3.5	Negative Supercoiling is caused by Underwinding a Circular Double-stranded DNA Molecule, as seen in the Diagram	241
4.3.6	Genomes of Prokaryotes and the Concept of Species	243
4.4	Microbial Genetics	245
4.4.1	Criteria for Determining the Mode of Recombination in Bacteria	247
4.4.2	Steroidal Transformation Types	274
4.5	Mutagenesis and its Types	287
4.5.1	Chemical Mutagens	289
4.5.2	Physical Mutagens	290
4.5.3	Occurrence of Mutations	291

(xii) Contents

4.5.4	Features of Spontaneous Mutations	291
4.5.5	DNA Repair Mechanisms	292
4.5.6	Types of Mutations	293
4.5.7	Detection and Isolation of Mutants	294
4.5.8	Replica Plating Technique	295
4.5.9	Resistance Selection Method	296
4.5.10	Substrate Utilization Method	296
4.5.11	Carcinogenicity Test	297
4.6	DNA Replication	298
4.7	Transcription (RNA Synthesis)	301
4.8	Translation	303
4.8.1	Steps of the Synthesis of a Protein Chain on a Ribosome	304
4.9	Gene Regulation	304
4.9.1	The Lac Operon	305
4.9.2	Positive Regulation of the Lac Operon-Catabolic Control	307
4.9.3	Tryptophan Operon	308
4.10	Phase Variation	311
	<i>Questions</i>	313

CHAPTER 5

**FERMENTATION AND
FERMENTATION PRODUCTS**

5.1	History and Design of Fermenters	314
5.2	Types of Fermenter	315
5.3	Fermentation Methods	318
5.4	Fermentation Media	321
5.5	Systems of Fermentation	322
5.6	Sterilization	326
5.7	Appropriate Construction of the Fermentor	327

5.7.1	Study of Production of Penicillin Fermentation (fed-batch) Method	329
5.7.2	Study of Production of Citric Acid	332
5.7.3	Study of Production of Vitamins Production	341
5.7.4	Study of Production of Glutamic Acid	346
5.7.5	Study of Production of Griseofulvin	348
5.8	Concept of Blood Components	353
	<i>Questions</i>	389
