

Contents

Preface	(v)
----------------------	------------

Chapter 1

Introduction to a Digital Communication System

1.0 Basic Communication System	1
1.1 Basic Digital Communication System	2
1.2 Comparison of a Digital Communication System with an Analog Communication System	3

Chapter 2

Some Random Variables

2.0 Introduction	6
2.1 Uniform Random Variable	6
2.2 Exponential Random Variable	7
2.3 Gaussian Random Variable	8
2.4 Rayleigh Random Variable	11
2.5 Rician Random Variable	14
2.6 Binomial Random Variable	16
2.7 Poisson Random Variable	17
2.8 Geometric Random Variable	18

Chapter 3

Sampling Theorem

3.0 Introduction to Sampling	20
3.1 Sampling Theorem for Low Pass Signal	21
3.1.1 Analysis of Instantaneously Sampled Signal	23
3.1.2 Practical Aspects of Sampling Theorem	28
3.1.3 Recovery of the Signal from its Sampled Version	29

(x) Contents

3.2	Sampling Theorem for Bandpass Signal	34
3.3	Sampling of Sinusoidal Signals	39
3.4	Types of Sampling	41
3.4.1	Natural Sampling	41
3.4.2	Flat Top Sampling	42
3.5	Solved Problems	46
3.6	Short Answer Questions	61
3.7	Exercise Problems	64
3.8	Scilab Simulations	66

Chapter 4

Analog to Digital Conversion

4.0	Introduction	73
4.1	Quantization	73
4.1.1	Types of Quantizers	76
4.2	Computation of Quantization Noise Power	77
4.3	Pulse Code Modulation	80
4.3.1	Data Word Length in a Binary PCM System	82
4.3.2	Bandwidth Requirement for a PCM Signal	82
4.3.3	Signal to Quantization Noise Power Ratio in PCM	83
4.4	Non-Uniform Quantization	86
4.4.1	Computation of Quantization Noise Power under Non-uniform Quantization	91
4.5	Differential Pulse Code Modulation (DPCM)	95
4.5.1	Comparison of DPCM with PCM	99
4.6	Delta Modulation	99
4.6.1	Limitations of Delta Modulation	102
4.6.2	Adaptive Delta Modulation	105
4.6.3	Comparison between DM and PCM	106
4.7	Line Encoding	107
4.7.1	Unipolar Signaling or ON-OFF Signaling	108
4.7.2	Non Return to Zero (NRZ) Signaling	111
4.7.3	Return to Zero (RZ) Signaling	112

4.7.4	Manchester Encoding	114
4.7.5	Bipolar Signaling	115
4.8	M-ary Signaling (M-ary PAM Pulses)	116
4.9	Solved Problems	118
4.10	Short Answer Questions	129
4.11	Exercise Problems	134
4.12	Scilab/Matlab Simulations	136

Chapter 5

Bandpass Digital Communication

5.0	Introduction	155
5.1	Amplitude Shift Keying (ASK)	158
5.1.1	Demodulation of ASK Signal	161
5.2	M-ary Phase Shift Keying (M-ary PSK)	163
5.3	Binary Phase Shift Keying (BPSK)	167
5.3.1	Demodulation of BPSK Signal	171
5.4	Non-Coherent - Orthogonal Modulation	172
5.5	Differential PSK (DPSK)	174
5.5.1	Orthogonality in DPSK	177
5.5.2	Error Rate in DPSK Scheme	178
5.6	Differently Encoded PSK (DEPSK)	178
5.6.1	Error Rate in DEPSK Scheme	180
5.7	Quaternary Phase Shift Keying (QPSK)	181
5.7.1	Demodulation of QPSK Signal	187
5.8	Offset or Staggered QPSK (OQPSK)	194
5.9	Frequency Shift Keying (FSK)	197
5.9.1	Bandwidth Requirement of FSK Signal	199
5.9.2	Demodulation of FSK Signal	200
5.9.3	Orthogonal FSK	202
5.10	Comparison between FSK and PSK	206
5.11	Solved Problems	207

5.12	Short Answer Questions	209
5.13	Scilab/Matlab Simulations	212

Chapter 6

Baseband Signal Receiver

6.0	Introduction	225
6.1	Optimum Filter	226
6.1.1	Matched Filter	231
6.2	Correlator Receiver	233
6.2.1	Comparison between Matched Filter and Correlator Receiver	234
6.3	Another Expression for the Threshold Level of the Decision Making Device	236
6.4	Integrate and Dump Receiver	237
6.4.1	Justification of the Transfer Function selected for the Integrator	240
6.4.2	Probability of Error for Integrate and Dump Receiver	241
6.5	Binary Threshold Detection	243
6.5.1	Maximum A Posteriori (MAP) Criterion	244
6.5.2	Maximum Likelihood Receiver	246
6.6	Noise Performance of Various Binary Digital Data Line Encoding Formats	249
6.6.1	Unipolar/ON-Off Signaling	249
6.6.2	Polar Signaling	249
6.6.3	Bi-Phase or Manchester Encoding	250
6.7	Solved Problems	251
6.8	Short Answer Questions	269
6.9	Exercise Problems	274

Chapter 7

Noise Performance of Digital Modulation Schemes

7.0	Introduction	277
7.1	Probability of Error for BPSK Modulation Scheme Detected using Matched Filter Receiver	278

7.2	Probability of Error for BPSK Modulation Scheme Detected using Correlator Receiver	279
7.2.1	Probability of Error for BPSK Modulation Scheme detected using Correlator receiver, with the local Signal suffering from Imperfect Phase Synchronization	280
7.3	Probability of Error for ASK Modulation Scheme (OOK) Detected using Matched Filter Receiver (Coherent Detection)	282
7.4	Probability of Error for ASK Modulation Scheme (OOK) Detected using Non Coherent Detection	283
7.5	Probability of Error for FSK Modulation Scheme Detected using Matched Filter Receiver (Coherent Detection)	286
7.5.1	Orthogonal FSK	287
7.6	Probability of Error for FSK Modulation Scheme Detected using Non-Coherent Detection	287
7.7	Probability of Error for DPSK Modulation Scheme (Non-Coherent PSK)	290
7.8	Probability of error for QPSK Modulation Scheme Detected using Matched Filter Receiver (Coherent Detection)	294
7.9	Gram-Schmidt Procedure for Orthogonalization of Signals	297
7.10	Noise in terms of Orthonormal Signals	301
7.11	Constellation Diagram of Digital Modulation Systems	302
7.11.1	Constellation Diagram for BPSK Modulation Scheme	303
7.11.2	Constellation Diagram for (OOK) ASK Modulation Scheme	306
7.11.3	Constellation Diagram for QPSK Modulation Scheme	308
7.11.4	Error Probability Computation in an M-ary PSK System	314
7.11.5	Constellation Diagram for FSK Modulation Scheme	317
7.12	Solved Problems	323
7.13	Short Answer Questions	336
7.14	Exercise Problems	341

Chapter 8

Information Theory

8.0	Introduction	344
8.1	Computation of Information Content	346
8.2	Units for Information Content of a Message	347

(xiv) Contents

8.3	Average Information Content of a Source	347
8.3.1	Maximum Value of the Entropy of a Discrete Source	349
8.3.2	Properties of Entropy	351
8.4	Information Rate of a Discrete Source	354
8.5	Measure of Information for Two Dimensional (Source-Sink) Case	354
8.5.1	Bounds on the Joint Entropy	355
8.5.2	Conditional Entropy	357
8.5.3	Relation between $H(X)$ and $H(X/Y)$	359
8.5.4	Relation between Marginal, Conditional and Joint Entropies	360
8.6	Source with Memory	361
8.7	Noise Characteristic of a Communication Channel	362
8.7.1	Obtaining the Joint Probability Matrix from Conditional Probability Matrix	364
8.8	Mutual Information	365
8.8.1	Properties of Mutual Information	367
8.9	Channel Capacity	368
8.9.1	Mathematical Modeling of Various Communication Channels	369
8.10	Information Theory for Continuous Random Variables	382
8.10.1	Entropy of Continuous Source Expressed in terms of the Expectation of the Random Variable Associated with the Source	385
8.11	Maximum Entropy of a Continuous Source	386
8.11.1	Maximization of Entropy $H(X)$ for a given Variance of 'X'	386
8.11.2	Maximization of Entropy $H(X)$ when 'X' is Limited to Some Peak Value	389
8.11.3	Maximization of Entropy $H(X)$ when 'x' is Limited to only Positive Values ($0 < x < \infty$) and is of Mean Value A	389
8.11.4	Entropy of Band Limited White Gaussian Noise	391
8.12	Capacity of a Band-limited Additive White Gaussian Noise (AWGN) Channel	392
8.13	Capacity of a Channel with Infinite Bandwidth	394
8.14	Exchange between Bandwidth and Signal to Noise Ratio	396
8.15	Solved Problems	397
8.16	Short Answer Questions	412

8.17	Exercise Problems	417
8.18	Scilab/Matlab Simulations	419

Chapter 9

Source Coding

9.0	Introduction	430
9.1	Shanon's Source Coding Theorem	431
9.1.1	Length of the Source Code Word and Code Efficiency	433
9.1.2	Classification of Various Source Coding Schemes	433
9.1.3	Kraft's Inequality	439
9.1.4	Validating Source Coding Theorem Mathematically	440
9.1.5	Bounds on Source Code Word Length	442
9.2	Requirements of Efficient Variable Length Source Code Words	442
9.3	Entropy Coding	443
9.3.1	SHANON-FANO ENCODING	443
9.3.2	HUFFMAN Coding	445
9.3.3	R-ary HUFFMAN Source Coding	448
9.3.4	Source Extension	449
9.4	Solved Problems	450
9.5	Short Answer Questions	460
9.6	Exercise Problems	463
