

Contents

CHAPTER 1

Introduction to Space Propulsion

1.1	Introduction.....	1
1.2	Brief History.....	2
1.3	Space.....	4
1.4	Propulsion.....	6
1.5	Propulsion Regions and Propulsion Technologies.....	8
1.5.1	Chemical Propulsion.....	10
1.5.2	Electric Space Propulsion.....	11
1.5.3	Advanced Propulsion.....	11

CHAPTER 2

Basic Orbital Mechanics

2.1	Introduction.....	13
2.2	Kepler's Laws.....	13
2.3	Newton's Laws of Motion.....	15
2.4	Universal Gravitational Law.....	16
2.5	Gravitational Field.....	16
2.6	Momentum.....	18
2.7	Orbit Types.....	19
2.8	Two Body Motion.....	21
2.9	Orbital Velocity and Time Period.....	22
2.10	Orbital Energy.....	23
2.11	Escape velocity.....	27
2.12	Keplerian Motion – Orbit Equation.....	28
2.12.1	Circular Orbits.....	31
2.12.2	Elliptical Orbits ($0 < e < 1$).....	33
2.12.3	Parabolic Orbit ($e = 1$).....	38
2.12.4	Hyperbolic Orbit ($e > 1$).....	39

2.13	Launch of a Space Vehicle	42
2.14	Reference Frames	44
2.14.1	Geocentric-Inertial Coordinate System	45
2.14.2	Heliocentric-Inertial System.....	46
2.15	Orbital Elements	46
Problems	48

CHAPTER 3

Rocket Principle and Performance Parameters

3.1	Introduction	49
3.2	Basic Principle of Rocket	49
3.3	Mass Ratios of Rocket.....	52
3.4	Rocket Equation	52
3.5	Distance Travelled.....	56
3.6	Rocket Performance Parameters.....	58
3.7	Multistage Rockets	60
Problems	67

CHAPTER 4

Rocket Nozzles

4.1	Introduction	69
4.2	High pressure Gas Expansion.....	69
4.3	Speed of Sound & Mach number	73
4.4	Nozzle Shape	75
4.5	Choking of Nozzle.....	78
4.6	Nozzle Area Ratio	79
4.7	Mass Flow Rate and Characteristic Velocity	82
4.8	Thrust generated by Rocket Engine.....	84
4.9	Characteristic Velocity and Specific Impulse	86

4.10	Effect of Ambient Pressure.....	88
4.10.1	Under-expansion Flow in the Nozzle.....	90
4.10.2	Over-expansion Flow in the Nozzle.....	92
4.11	Nozzle configuration	92
4.11.1	Conical Nozzle	94
4.11.2	Bell Nozzle	97
4.11.3	Advanced Nozzle	98
4.11.3.1	Extendible Nozzle.....	98
4.11.3.2	Dual Bell-Shaped Nozzle.....	99
4.11.3.3	Plug or Aerospike Nozzle.....	99
4.11.3.4	Expansion-deflection Nozzles	99
4.11.3.5	Multi Nozzle Grid (MNG).....	100
4.12	Losses in Nozzles	100
Problems.....		104

CHAPTER 5

Rocket Propellants

5.1	Introduction	107
5.2	Molecular Mass of Combustion Gasses	107
5.3	Aliphatic and Aromatic Compounds.....	108
5.4	Moles and Mole fraction	110
5.5	Stoichiometry and Mixture Ratio	110
5.6	Heat of Formation.....	111
5.7	Heat of Reaction	111
5.8	Calculation of Combustion Temperature and Products Molecular Mass	113
5.9	Chemical Equilibrium	118
5.10	Composition of Products	121
5.11	Frozen and Shifting Equilibrium.....	124

5.12	Relevant Properties for the Selection of Propellants	129
5.13	Liquid Propellants	131
5.13.1	Liquid Oxidizers	131
5.13.2	Liquid Fuels.....	132
5.14	Solid Propellants.....	134
5.14.1	Homogeneous Solid Propellants	137
5.14.2	Heterogeneous or Composite Solid Propellants.....	137
5.15	Hybrid Propellants.....	142
	Problems.....	143

CHAPTER 6

Solid Propellant Motors

6.1	Introduction	145
6.2	Components of SRM	145
6.2.1	The SRM Case.....	146
6.2.2	Propellant Grain	148
6.2.3	The Nozzle	149
6.3	Classification of SRM	151
6.4	Performance Parameters	151
6.5	Propellant Burn Rate	152
6.5.1	Measurement of Burn Rate.....	153
6.5.2	Effect of Chamber Pressure on Burn Rate	154
6.5.3	Effect of Grain Temperature on Burn Rate	158
6.5.3.1	Relation between σ_p and π_K	159
6.5.4	Effect of Internal Flows.....	160
6.5.4.1	Pressure Drop	160
6.5.4.2	Erosive Burning	161
6.5.5	Effects of Acceleration on Burning Rate	162

6.6	Propellant Grain Configuration	162
6.7	Grain Architecture	163
6.8	Selection of Grain Configuration	164
6.8.1	Grain Requirements.....	165
6.8.2	Grain Configuration	165
6.9	Evolution of Burning Surface.....	166
6.10	Solid Propellant Grain Ignition	172
6.10.1	Ignition Transient	172
6.10.2	Action Time and Burn Time	173
6.10.3	Ignition System.....	175
	Problems.....	178

CHAPTER 7

Liquid Rocket Engines

7.1	Introduction	180
7.2	Basic Configuration.....	183
7.3	Pressure-fed System	184
7.4	Turbo pump-fed Systems	186
7.4.1	Turbo Pump.....	187
7.5	Engine Cycles	193
7.5.1	Bipropellant Gas Generator (BGG) Cycle	193
7.5.2	Tap-off Cycle	197
7.5.3	Expander Cycle	198
7.5.4	Staged Cycle.....	200
7.6	Thrust Chamber Assembly	206
7.6.1	Thrust Chamber.....	206
7.7	Injector.....	212
7.7.1	Atomization Process.....	213
7.7.2	Injector Types.....	216
7.7.2.1	Non impinging Injectors	216

7.7.2.2 Impinging Injectors	218
7.7.3 Injector Design Considerations	220
7.8 Engine Start Method.....	225
Problems.....	226

CHAPTER 8

Hybrid Rocket Engines

8.1 Introduction	228
8.2 Propellants	229
8.3 Hybrid Rocket Characteristics.....	230
8.4 Regression Rate and Modelling.....	231
8.5 Regression Rate Enhancement Techniques.....	234

CHAPTER 9

Thrust Chamber Cooling

9.1 Introduction	236
9.2 Regenerative Cooling	237
9.2.1 Heat Transfer Coefficient on Hot Gas Side.....	240
9.2.2 Radiation Heat Transfer	243
9.2.3 Coolant Side Heat Transfer Coefficient	244
9.2.4 Chamber Wall Heat Transfer	246
9.2.5 Coupled Heat Transfer in the Thrust Chamber	246
9.3 Film Cooling.....	251
9.4 Ablative Cooling	253
9.5 Radiation Cooling.....	255

CHAPTER 10

Combustion instabilities

10.1 Introduction	257
10.2 Wave Motion	258

10.3	Classification of Combustion Instabilities.....	260
10.4	Low-frequency Instabilities in LRE	263
10.5	High-frequency Instabilities in LRE.....	265
10.6	Coupling Mechanisms	267
10.7	Combustion Instability Control Devices	268
	10.7.1 Symmetric Injector Plate Baffle	269
	10.7.2 Resonance Absorbers	271
10.8	POGO Instability	272
10.9	Combustion Instability in Solid Rocket Motor (SRM)	274
	10.9.1 T-Burner and Pressure-Coupled Response Determination.....	278

CHAPTER 11

Spacecraft Orbital Maneuvers

11.1	Spacecraft Propulsion	280
11.2	Attitude Maneuver	281
11.3	Torque to a Spacecraft.....	284
	11.3.1 One Axis Maneuver.....	285
11.4	Orbit Shaping.....	287
	11.4.1 Hohmann Transfer.....	288
	11.4.2 Bielliptic Hohmann Transfer.....	295
11.5	Phasing Maneuver	296
11.6	General Coplanar Transfer	299
11.7	Inclination Change Maneuver	300
11.8	Combined Maneuver	302
11.9	Launch Azimuth	304
	<i>Problems</i>	310

CHAPTER 12

Interplanetary Trajectories

12.1	Introduction	312
------	--------------------	-----

12.2	Sphere of Influence (SOI)	314
12.3	Patched Conic Method.....	315
12.4	Heliocentric Transfer.....	317
12.5	Planetary Departure	320
12.6	Planetary Arrival.....	322
12.7	Lunar Orbit	328
12.8	Gravity Assists.....	330
12.9	Synodic period.....	333
	Problems.....	338

CHAPTER 13

Chemical Thrusters for SpaceCraft Manoeuvres

13.1	Introduction	339
13.2	Cold Gas System	339
13.3	Monopropellant System.....	342
	13.3.1 Steady State and Pulsed Performance	342
	13.3.2 Blowdown System.....	344
	13.3.3 Propellant Inventory	347
	13.3.4 Main Components of the Monopropellant System.....	347
13.4	Estimation of Mass of the Propulsion System.....	349
13.5	Bipropellant System	354
13.6	Dual Mode System	357
13.7	Typical Missions with Chemical Propulsion.....	358
	Problems.....	362

CHAPTER 14

Electric Propulsion Systems

14.1	Introduction	363
14.2	Types of Electric Thrusters.....	364

14.3	Electric Thruster Efficiency	365
14.4	Electrothermal Thrusters	366
	14.4.1 Resistojet Thruster.....	366
	14.4.2 Arcjet Thruster	369
14.5	Electric Field and Electrostatic Field.....	370
14.6	Electrostatic Thrusters	372
	14.6.1 Ion Thruster	372
	14.6.2 Hall Effect Thrusters	376
	14.6.3 Field-Effect Electrostatic Propulsion (FEEP) Thruster.....	378
14.7	Electromagnetic Thrusters.....	379
	14.7.1 Magneto plasma dynamic (MPD) Thrusters	379
	14.7.2 Pulsed Plasma Thruster (PPT).....	380
14.8	Electric Propulsion Applications.....	381
	14.8.1 Station Keeping.....	381
	14.8.2 Orbit Raising	381
	14.8.3 Deep Space Propulsion.....	381
14.9	Variable Specific Impulse Magneto Plasma Rocket (VASIMR)	382
14.10	Electrical Propulsion Thrusters Power Requirement.....	383
14.11	Nuclear Propulsion	386
	Problems	391
	References	393
	Index	399
