

Contents

| | |
|---------------|-----|
| Preface | (v) |
|---------------|-----|

Chapter 1: Per Unit Representation

| | |
|------------------|-----------|
| 1.0 Introduction | 1 |
| <i>Exercise</i> | 64 |

Chapter 2: Introduction to Fault Analysis

| | |
|--|-----------|
| 2.0 Introduction | 67 |
| 2.1 Transients due to Balanced Fault | 67 |
| 2.2 Transients owing to a 3 – Phase Alternator Terminal Short Circuit | 71 |
| <i>Exercise</i> | 72 |

Chapter 3: Symmetrical Fault Analysis

| | |
|---|-----------|
| 3.1 Necessity for Short Circuit Calculation | 73 |
| 3.2 Symmetrical Fault Calculation | 73 |
| 3.3 Application of Thevenin Theorem | 73 |
| 3.3.1 Symmetrical Short Circuit Analysis | 73 |
| 3.4 Generator Reactors | 83 |
| 3.5 Feeder Reactor | 84 |
| 3.6 Bus Bar Reactor | 84 |
| <i>Exercise</i> | 85 |
| <i>Answers</i> | 85 |

Chapter 4: The Analytical Concept for Symmetrical Components

| | |
|--|------------|
| 4.1 Introduction | 86 |
| 4.1.1 Concept of ‘a’ Operator | 86 |
| 4.2 Sequence Component to Unbalance Phase Conversion | 87 |
| 4.3 Unbalance Phase to Sequence Component Conversion | 88 |
| 4.4 Sequence Impedances and Sequence Networks | 96 |
| <i>Exercise</i> | 104 |

Chapter 5: Asymmetrical Faults in Power Systems

| | | |
|-----|-----------------------------|------------|
| 5.1 | Introduction | 107 |
| 5.2 | Single Line-To-Ground Fault | 107 |
| 5.3 | Line-To-Line Fault | 111 |
| 5.4 | Double Line-to-Ground Fault | 112 |
| | Problems | 114 |
| | Exercise | 115 |
| | Answers | 116 |

Chapter 6: Load Flow Analysis

| | | |
|-----|--|-----|
| 6.1 | Introduction | 117 |
| 6.2 | Classification of Bus | 117 |
| 6.3 | Power Flow Equation | 118 |
| 6.4 | Admittance Bus Matrix | 118 |
| 6.5 | The Algorithm for the Gauss-Seidel Iteration | 126 |
| | 6.5.1 Importance of Gauss Seidel Method in Power Flow Analysis | 128 |
| | 6.5.2 Analysis | 128 |
| 6.6 | Newton-Raphson Method of Load Flow Analysis | 168 |
| | 6.6.1 Analytical Concept of N-R Load Flow Technique | 169 |
| | 6.6.2 Load Flow Solution with Newton–Raphson (NR) Method | 170 |

Chapter 7: Economic Load Dispatch

| | | |
|-----|---|------------|
| 7.1 | Introduction of Economic Load Dispatch | 193 |
| 7.2 | Economic Scheduling | 193 |
| 7.3 | Formulation of Economic Load Dispatch Problem | 194 |
| | 7.3.1 Constraints | 194 |
| | 7.3.2 The Problem Objective Function | 194 |
| | 7.3.2.1 The Fuel Cost Function of Power Plant | 194 |
| | Exercise | 221 |
| | Answers | 222 |

Chapter 8: Power Angle Stability and its Analysis

| | | |
|------------------------------|--|------------|
| 8.1 | Introduction | 224 |
| 8.2 | Definitions | 224 |
| 8.3 | Types of Stability | 224 |
| 8.4 | Power Angle Equation | 225 |
| <i>Solved Problem</i> | | 227 |
| 8.5 | Techniques for getting better Steady State Stability | 228 |
| 8.6 | Swing Equation | 228 |
| 8.7 | Analytical Concept of Swing Equation | 229 |
| 8.8 | Swing Curves | 230 |
| 8.8.1 | Use of Swing Curves | 230 |
| 8.9 | Constants used in Stability Analysis | 231 |
| 8.9.1 | Inertia Constant M | 231 |
| 8.9.2 | Kinetic Energy N | 231 |
| 8.9.3 | Inertia Constant H | 231 |
| 8.9.4 | Equivalent H Constant | 232 |
| 8.9.5 | Equivalent M Constant of Two Machines | 233 |
| 8.9.6 | Equal Area Criterion of Stability | 234 |
| 8.10 | Critical Clearing Angle | 240 |
| <i>Exercise</i> | | 246 |
