*Preface*.....(vii)

## CHAPTER 1

**Introduction**..... 1

1.1 Definition of Important Terminology used in Astronomy..... 3

    1.1.1 Intensity and Specific Intensity ..... 3

    1.1.2 Luminosity ..... 4

    1.1.3 Flux Density ..... 4

    1.1.4 Parsec and Light-year ..... 4

    1.1.5 The Magnitude System..... 4

    1.1.6 Apparent and Absolute Magnitudes and the  
        Distance Modulus ..... 5

    1.1.7 Doppler Shift ..... 7

1.2 A Glossary of Astronomical Objects ..... 7

    1.2.1 The Sun ..... 9

    1.2.2 Planets.....10

        1.2.2.1 Exoplanets .....11

    1.2.3 Stars .....12

        1.2.3.1 Classification of Stars .....13

        1.2.3.2 Main Sequence .....14

        1.2.3.3 Equations Governing the  
                Stellar Interiors .....17

        1.2.3.4 Stability Criteria and  
                Timescales of Stars.....18

        1.2.3.5 Stellar Evolution.....21

        1.2.3.6 Binary Stars.....22

        1.2.3.7 Mass Loss from Stars.....25

        1.2.3.8 Variable Stars .....27

    1.2.4 Interstellar Medium (ISM) .....28

        1.2.4.1 Star Forming Regions.....30

        1.2.4.2 HII Regions .....34

1.2.4.3 Planetary Nebulae .....	36
1.2.4.4 Supernova Remnants .....	37
1.2.5 Galaxies.....	38
1.2.6 Transient Sources .....	41
1.3 The Forthcoming Chapters .....	42

## CHAPTER 2

### **Telescopes and Detectors..... 43**

2.1 Celestial Sphere and Equatorial Coordinate System.....	43
2.1.1 Local Horizon Coordinate System .....	45
2.1.2 Transit and Sidereal Time.....	46
2.2 Telescope Mirrors.....	50
2.2.1 Telescope Mounts .....	50
2.2.2 Light Collecting Capacity and Diffraction Limit.....	51
2.2.3 Types of Telescope Optics .....	53
2.2.4 Surface Quality of the Primary.....	53
2.2.5 Focal Ratio and Plate Scale .....	54
2.2.6 Point Spread Function.....	56
2.2.7 Encircled Energy.....	57
2.2.8 Strehl Ratio .....	58
2.2.9 Stops and Pupils.....	59
2.3 Environmental Effects on Quality of Observational Data.....	60
2.3.1 Atmospheric Turbulence and Seeing.....	61
2.3.2 Active and Adaptive Optics .....	64
2.4 Detectors .....	66
2.4.1 Goly Cell for Infrared .....	66
2.4.2 Bolometers .....	67
2.4.3 Photographic Emulsion .....	67
2.4.4 Photo-Electric Effect .....	69
2.4.5 Parameters Defining the Performance of a Detector.....	71
2.4.6 Single Element Detectors: Photomultiplier.....	72
2.4.7 Array Detectors for Optical Region.....	74
2.4.7.1 Image Intensifier and Micro-channel Plate.....	74

2.4.7.2 Imaging Photon-counting Detector (IPCD) .....	75
2.4.7.3 Charge Coupled Device (CCD) .....	76
2.4.7.4 Complementary Metal-Oxide Semiconductor (CMOS).....	80
2.4.8 Infrared Array Detectors.....	80

**CHAPTER 3**

<b>Radiation Processes and Atomic and Molecular Spectroscopy .....</b>	<b>85</b>
3.1 Blackbody Radiation.....	85
3.2 Free-Free Radiation .....	88
3.3 Synchrotron Radiation .....	89
3.4 The 2-Photon Radiation .....	91
3.5 Basic Atomic Processes .....	93
3.5.1 Spectrum of Hydrogen Atom .....	95
3.5.2 Collisional Excitation .....	97
3.5.3 Critical Density .....	97
3.5.4 Forbidden Lines .....	98
3.5.5 Stimulated Emission .....	99
3.6 Molecular Spectra .....	100
3.6.1 Types of Molecular Spectra – Electronic, Vibrational and Rotational Spectra.....	100
3.6.1.1 Selection Rules and Molecular Spectra..	103
3.6.2 Hydrogen Molecule.....	105
3.6.3 Carbon Monoxide .....	107
3.6.4 Other Important Molecules .....	108
3.7 Very Large Molecules: Polycyclic Aromatic Hydrocarbons	110
3.8 Cosmic Dust Grains .....	113
3.8.1 Spectral Features of Dust Grains and PAH Molecules.....	115
3.9 Extinction .....	115
3.9.1 Sources of Dust.....	119
3.9.2 Composition of Dust Grains .....	120
3.9.3 Gas-to-Dust Ratio .....	121

3.10	Radiation Transfer and Line Formation and Broadening	124
3.10.1	Radiation Transfer	124
3.10.2	Plane Parallel Atmosphere	126
3.10.3	Source Function	126
3.11	Line Broadening	127
3.11.1	Natural Broadening	127
3.11.2	Doppler Broadening	128
3.11.3	Pressure or Collisional Broadening	129
3.11.4	Rotational Broadening	130
3.11.5	Voigt Profile	132
3.11.6	Zeeman Splitting	132
3.12	Line Formation	132
3.12.1	Equivalent Width	134
3.12.2	Curve of Growth	135
3.13	Stellar Spectra	138
3.13.1	Absorption Spectra	138
3.13.2	Resonance Scattering	138
3.13.3	Recombination	138
3.13.4	Collisional Excitation	138

## CHAPTER 4

<b>Photometric Techniques</b>	<b>140</b>	
4.1	Optical Layout of a Photometer	141
4.2	Integration or Exposure Time and Signal-to-Noise Ratio	142
4.2.1	Background-limited and Detector or Photon-limited Performance	143
4.2.2	Zero-Point Magnitude	144
4.3	Sky Background Across the Electromagnetic Spectrum	145
4.3.1	Sky Background in the Optical Region	146
4.3.2	Atmospheric Emission in the Near- and Mid-Infrared Regions	147
4.4	Photometric Standard Filters in the Visible Region	148
4.4.1	Colour Index	150
4.4.2	Colour-Colour and Colour-Magnitude Diagrams	151

4.4.3	Extinction of Light.....	153
4.4.4	Colour Excess .....	153
4.4.5	Stromgren Standard Filters .....	154
4.4.6	Wing's Narrow-band Photometric Filters.....	155
4.5	Near-Infrared Photometric Filters.....	156
4.5.1	Infrared Colour Indices.....	158
4.5.2	Colour-Colour and Colour-Magnitude Diagrams in Infrared.....	159
4.6	Atmospheric Effect due to Zenith Angle.....	163
4.7	Relative, Absolute and Differential Photometry .....	167
4.7.1	Differential Photometry.....	167
4.8	Point and Extended Sources.....	168
4.8.1	Surface Brightness .....	169
4.9	Photometric Observational Procedures and Data Processing in the Visible and Infrared Regions .....	169
4.9.1	Photometric Errors.....	172
4.9.2	Completeness Limit for Observation on a Star Cluster.....	172
4.9.3	Standard Stars in Visible and Near-infrared Regions.....	173
4.10	Spectral Energy Distribution.....	173
4.11	A Brief Note on Polarimetry .....	174

**CHAPTER 5**

**Spectroscopic Techniques.....178**

5.1	Optical Layout and Figures of Merit of a Spectrometer .....	179
5.1.1	Design Parameters of a Spectrometer .....	179
5.1.2	Rayleigh Criterion for Resolving Two Spectral Lines .....	180
5.2	Prism Spectrograph .....	181
5.2.1	Dispersion in a Prism.....	182
5.2.2	Resolving Power .....	183
5.3	Diffraction Grating Spectrograph.....	185
5.3.1	Dispersion and Resolving Power.....	190
5.3.2	Blazing .....	191

5.3.3	Anamorphism .....	194
5.3.4	Band-pass .....	195
5.3.5	Overlapping Orders and Free-spectral Range.....	195
5.3.6	Stray light .....	195
5.3.7	PRL Grating Spectrometers for Optical and Near-Infrared Region.....	195
5.3.8	Echelle Grating Spectrograph.....	197
5.3.9	Grism Spectrograph .....	200
5.3.10	Image Curvature and Tilt in Grating Spectrograph .....	200
5.3.11	Slit-less Spectrograph.....	201
5.4	Two-Beam Interferometry: Michelson Interferometer .....	201
5.4.1	Michelson Interferometer.....	206
5.4.1.1	Circular Fringes .....	207
5.4.1.2	Localised Fringes .....	207
5.4.1.3	White Light Fringes .....	207
5.4.1.4	Visibility of Fringes .....	207
5.4.2	Fourier Transform Spectrometer .....	209
5.5	Multiple-Beam Interferometer:	
	Fabry-Perot Interferometer .....	211
5.5.1	Fabry-Perot Interferometer.....	216
5.5.1.1	Reflection Finesse.....	216
5.5.1.2	Resolving Power .....	217
5.5.1.3	Free-Spectral Range .....	218
5.5.1.4	Fringe Contrast.....	219
5.5.1.5	Fractional Order.....	219
5.5.1.6	Radii of Fringes.....	220
5.5.1.7	Angular Width of Fringe and Resolving Power .....	220
5.5.2	Types of Fabry-Perot Etalons.....	222
5.5.3	Effective Finesse .....	224
5.5.4	Schematic of Optical Arrangement for FPS.....	226
5.5.5	Wavelength Scanning .....	227
5.5.5.1	Tilt – scanning.....	227
5.5.5.2	Scanning by Refractive Index .....	227
5.5.5.3	Gap Scanning .....	228

5.5.6 Environmental Factors Affecting Etalon Performance.....	231
5.5.7 Phase Correction .....	231
5.5.8 Wavelength Calibration.....	233
5.5.9 Central Fringe Scanning FPS.....	235
5.5.10 Imaging of a Single Interferogram.....	237
5.5.11 Imaging FPS (IFPS).....	238
5.5.12 Tele-Centric Mode - Infrared IFPS.....	241
5.5.13 Fabry-Perot Etalon as a Tuneable Narrow-band Filter .....	242
5.5.14 Etalons in Tandem .....	244
5.5.15 FPS in Tandem with Other Spectrometers .....	245
5.6 Resolution-Luminosity Product for Various Spectrographs .....	245
5.7 Integral Field Spectroscopy Techniques .....	247
5.8 Interference Filters .....	250
5.8.1 Dichroic Filters.....	251
5.9 Data Analysis of Spectroscopic Observations .....	251
5.9.1 Grating Spectrometer Data Analysis .....	251
5.9.2 Analysis of Fabry-Perot Spectrometer Data.....	253
5.9.2.1 Central-Fringe Scanning FPS.....	253
5.9.2.2 Single Interferogram Mode.....	254
5.9.2.3 IFPS Data Cube Analysis .....	254
5.9.2.4 FPS Fringes in Mono-Chromatic and Quasi-Monochromatic Light Beams.....	255

**CHAPTER 6**

<b>Data Quality Enhancement Techniques.....</b>	<b>256</b>
6.1 Accuracy and Precision .....	256
6.2 Noise Reduction.....	257
6.2.1 SNR and Exposure Time .....	257
6.2.2 Co-adding Data .....	258
6.3 Data Quality Enhancement .....	258
6.3.1 Moving Average Method for 1-D data.....	258
6.3.2 Mean and Median Filtering for 2-D (image) Data.	259

6.3.3 Filtering in Spatial Frequency Domain.....	259
6.3.4 Examples of 1-D and 2-D Filtering.....	262
6.4 Deconvolution.....	267
6.5 Decomposition of Composite Profiles.....	271

**CHAPTER 7**

<b>Epilogue.....</b>	<b>275</b>
----------------------	------------

**Appendices**

A1. Table of Physical Constants and Astronomical Quantities.....	281
A2. Probable Errors of a Function of Many Variables.....	282
A3. Table of Vega ( $\alpha$ Lyrae: A0V star) Standard Fluxes.....	282
A4. Table of Colours for Luminosity Classes I, III and V.....	283
A5. Space Probes Past/Present/Future by NASA/ESA/Japan/India.....	284
A6. Examples.....	287

<b><i>References.....</i></b>	<b>291</b>
