Preface

(vii)

CHAPTER 1

Anatomy and Physiology of Gastro Intestinal Tract (GIT) and Drug Absorption

Stomach	2
Histology of Stomach.....	2
Gastric Emptying.....	3
Gastric Emptying during the Digestive Period or Fed State	3
Gastric Emptying in the Inter-Digestive Period or Fasting State	4
Effect of Stomach Emptying on Bioavailability of Dosage Forms....	4
Multi-particulate System	4
Small Intestine.....	5
Small Intestinal Transit Time.....	7
Intestinal Fluid Composition.....	7
The Colon or Large Intestine	8
Colon Transit.....	9
Colonic Fluid Volume.....	10
Viscosity of Colonic Luminal Contents	10
Colonic pH	10
Colonic Enzymes and Metabolism.....	11
Tablets versus Pellets Colon Transit	11
Morning versus Evening Dosing.....	12
The Pancreas	12
The Liver.....	12
Mechanisms of Drug Absorption	12
Structure of Plasma Membrane	12
Sublingual Route	20

CHAPTER 2

Reverse Engineering or Deformulation

Qualitative Composition (Q1)	23
Solid State Characterization of API	23
Quantitative Composition (Q2)	27
Three-Dimensional Structure of Dosage Form or Pharmaceutical Equivalence (Q3).....	28
Scanning Electron Microscope (SEM)	28
Near Infrared Chemical Imaging (NIR-CI)	30
Confocal Raman Microscopy	31
3-Dimensional Raman Mapping	33
Terahertz Technology.....	35
Scanning Electron Microscopy and X-Ray Energy Dispersive Spectroscopy (SEM-EDS).....	37
Computed Tomography and Energy Dispersive X-ray Fluorescence (EDXRF)	38

CHAPTER 3

Effect of Active Pharmaceutical Ingredient (API) and Other Factors on Drug Absorption

Introduction	41
Physicochemical Properties of Drug Affecting Oral Absorption	41
Solubility	42
Permeability	43
Weakly Basic Drugs.....	47
Biopharmaceutics Classification System (BCS)	48
Other Properties of API.....	50
Crystalline Solids	51
Amorphous Solids	51
Desmotropism	56
Crystal Habit	57
Effect of Excipients on Oral Absorption of Drugs.....	58
Introduction	58
Drug-Excipient Interactions	59
Drug Adsorption on Excipient Surface	60
Excipient-Excipient Interactions	60
Effect of Excipients on Gastro-Intestinal Tract.....	60

CHAPTER 4

In-vitro Tests and their Significance

Introduction	69
Disintegration Test	69
Dissolution.....	71
Mechanisms of Dissolution	72
Dissolution Test.....	75
Dissolution Test Conditions	76
Compendial Methods or Official Methods	76
Apparatus	76
Rotational Speed.....	78
Dissolution Media	79
Sampling Time Points	82
Special Dosage Forms	83
Important Test Conditions for Simulation of GIT Conditions	84
Non-Compendial Dissolution Tests.....	87
Rotating Bottle Apparatus	87
Biphasic Dissolution Method	87
Stress Test Apparatus	88
Dynamic Gastric Model (DGM)	88
Simulator of the Gastrointestinal Tract (TIM-1 and 2)	89
Small Volume Dissolution Test	89
Peristaltic Method.....	89
Sartorius Absorption Simulator Method	91
Dialysis Method	92
Sampling from Outer Compartment.....	93
Sampling from Inner Compartment.....	94
Crescent Shaped Spindle	94
Rotating Filter Method	95
Mathematical Models for Dissolution Profiles.....	97
Dissolution Profile Comparisons.....	112
Physical Observation	115

CHAPTER 5

Biorelevant Media and Tests

Introduction	117
Concept of Biorelevant Media.....	117
Composition of the Gastrointestinal Fluid	118
Stomach.....	118
Small Intestine.....	119
Large Intestine or Colon.....	121
Properties of the Gastrointestinal Fluid.....	121
pH.....	121
Buffer Capacity	122
Osmolality	122
Surface Tension.....	123
Viscosity.....	123
Temperature.....	123
Volume.....	123
Hydrodynamics	124
Gastric-emptying Rate and Forces	125
Intestinal Transit Time and Flow Rate	126
Colon Transit Time.....	126
Need for Biorelevant Media	127
Compositions and Preparation of Biorelevant Media.....	127
Biorelevant Media for Stomach in Fasting and Fed Conditions	128
Composition of the Medium to Simulate the Fasted State Stomach ...	128
Properties.....	128
Composition of the Media to Simulate the Fed-State Stomach.....	128
Biorelevant Media for Small Intestine in Fasting and Fed Conditions	129
Biorelevant Media for Colon.....	132
Preparation Methods.....	132
Other Biorelevant Tests.....	136
Change Over Media.....	136
Fasting State Change Over Media.....	136
Fed State Dynamic Media	137
Resistance Dissolution Test for Delayed Release Products	138

CHAPTER 6

How to Identify Right Test(s) for a given Drug Product?

Introduction	139
Active Pharmaceutical Ingredient (API) Characters	139
Polymorphism	140
Amorphous Form	142
Crystal Habit	146
Desmotropes	147
Hydrates and Solvates	147
Co-Crystals	149
Particle Size Distribution of Drug Substance	150
Solubility	151
Biopharmaceutics Classification System (BCS)	152
Solubility	152
Permeability	153
Factors from Solid Oral Dosage Forms (Tablets and Capsules)	154
Tablets	155
Excipients	156
Drug-Excipient Interactions	157
Excipient-Excipient Interactions	158
pH of GI Fluids.....	159
Microenvironmental pH of Dosage Form	159
GI Transit Time	160
Modulation of Drug Degradation and Membrane Permeation	160
Inhibition of Drug Metabolism and Efflux.....	161
Cytochrome p-450 (CYP) Enzymes.....	161
P-glycoprotein (P-gp) Efflux Transporters.....	161
Compaction into Tablets	163
Immediate Release Tablets.....	165
Dissolution Data Analysis	165
Polymethacrylates	178
Cellulose Derivatives	178
Polyvinyl Derivatives	178
Other Materials.....	178
Drug Delivery Designs	178
Monolithic	179

Multiparticulate System	179
Gastro Retentive Drug Delivery System (GRDDS).....	179
Colon Targeted Drug Delivery Systems (CDDS)	181
Sublingual Tablets.....	182
Buccal Tablets	182
Orally Disintegrating Tablets	183
Capsules	184

CHAPTER 7

In-Vitro In-Vivo Correlation

Categories of <i>In Vitro/In Vivo</i> Correlations.....	187
BCS Based IVIVC.....	188
General Considerations in Developing IVIVC as per US FDA	189
Applications of IVIVC	199

CHAPTER 8

In-Vitro Tests for Bioequivalence

Locally Acting Oral Products.....	201
Dermatological Products	205
Ophthalmic and Otic Products	207
Nasal spray/Nasal Aerosol	209
Dry Powder Inhalations.....	210
Device Resistance.....	211
Injectables.....	212
Particle Morphology and Particle Size Distribution.....	213
Medroxyprogesterone Acetate	214

CHAPTER 9

Biowaivers

Solubility	218
Permeability	219
Excipients	221
<i>In vitro</i> Dissolution.....	222

CHAPTER 10

Bioequivalence Studies

Single Dose Studies	236
Steady State Studies or Multiple Dosing Studies	236
Strength to be Investigated	236
Linear Pharmacokinetics	237
Non-linear Pharmacokinetics	237
Bracketing Approach.....	238
Fixed Combinations	238
Study Designs.....	239
Study Population	242
Number of Subjects	243
Drug Levels in Biological Specimen.....	243
Moieties Measured in Sample	244
Fed Bioequivalence Studies	247
Sprinkle Bioequivalence Study	248
Bioequivalence Studies of Products Administered in Specific Beverages	249
Pharmacokinetic Information in Submissions.....	249
Bioequivalence Criteria.....	250
Pilot Bioequivalence Studies.....	253
